FUND SUMMARY

Investment Objective: The Superfund Managed Futures Strategy Fund (the “Fund”) seeks positive absolute returns.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below. You may qualify for sales charge discounts on purchases of Class A shares if you and your family invest, or agree to invest in the future, at least \$25,000 in the Fund. More information about these and other discounts is available from your financial intermediary and in the section entitled **How to Purchase Shares** on page 23 of this Prospectus.

Shareholder Fees (fees paid directly from your investment)	Class A	Class C*	Class I
Maximum Sales Charge (Load) Imposed on Purchases ⁽¹⁾ (as a % of offering price)	5.75%	None	None
Maximum Deferred Sales Charge (Load) (as a % of original purchase price)	None	None	None
Maximum Sales Charge (Load) Imposed On Reinvested Dividends and other Distributions	None	None	None
Redemption Fee (as a % of amount redeemed within 30 days of purchase)	1.00%	1.00%	1.00%
Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)			
Management Fees ⁽²⁾	2.99%	2.99%	2.99%
Distribution and Service (12b-1) Fees	0.25%	1.00%	None
Other Expenses	0.00%	0.00%	0.00%
Acquired Fund Fees and Expenses	0.00%	0.00%	0.00%
Total Annual Fund Operating Expenses	3.24%	3.99%	2.99%
Expense Waiver and 12b-1 Fee Waiver ⁽³⁾	(3.24)%	(3.99)%	(2.99)%
Total Annual Fund Operating Expenses After Expense Waiver ⁽²⁾	0.00%	0.00%	0.00%

(1) The Fund will waive the front-end sales charge on all direct purchases of Fund shares and for certain other investors as described below. See *Sales Charge Waivers* under “How to Purchase Shares”.

(2) The Fund’s adviser provides investment advisory service, and pays most of the Fund’s operating expenses (with certain exceptions, i.e. any taxes, short selling expenses, interest, brokerage commissions, expenses incurred in connection with any merger or reorganization, indirect expenses, expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation) in return for a “unitary fee”.

(3) The Fund’s adviser has contractually agreed to reduce the Fund’s fees and/or absorb expenses of the Fund, including acquired fund fees and expenses, through February 28, 2023 to ensure that total annual Fund operating expenses (exclusive of any front-end or contingent deferred loads; brokerage fees and commissions; borrowing costs, such as interest and dividend expense on securities sold short; taxes; and extraordinary expenses, such as litigation expenses) do not exceed 0.00% of average daily net assets attributable to each of Class A, Class C and Class I shares, respectively. The Fund’s adviser has contractually agreed to waive the Fund’s distribution and shareholder servicing fees under the 12b-1 plans through February 28, 2023 to 0.00% with respect to each of Class A and Class C shares, respectively. Waived fees are not subject to potential future recoupment. These agreements may be terminated by the Fund’s Board of Trustees on 60 days’ written notice to the adviser. There is no guarantee that any of these expense limitation and fee waiver agreements will continue in place after February 28, 2023 at which time it will be determined whether such agreements will be renewed or revised.

* Class C Shares had not commenced operations as of the date of this prospectus. Amounts for Class C Shares are based on estimates for the current fiscal year.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same (except that the Example incorporates any applicable fee waiver and/or expense limitation arrangements for only the first year). Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class A	\$575	\$1,228	\$1,903	\$3,700
Class C	\$0	\$846	\$1,710	\$3,946
Class I	\$0	\$641	\$1,307	\$3,094

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. For the fiscal year ended October 31, 2021, the Fund’s portfolio turnover rate was 0% of the average value of its portfolio. The Fund calculates portfolio turnover without including derivative transactions such as futures and forwards contracts. If the Fund’s use of such derivative instruments was reflected, the calculated portfolio turnover rate would be higher.

Principal Investment Strategies: To pursue its investment objective, the Fund uses a managed futures strategy and principally invests in U.S. and international, including emerging market, commodity and financial futures and foreign currency markets. The Fund seeks investment opportunities across many market sectors, including: currencies, interest rates, bonds, stock indices, metals, energy, grains and agricultural sectors. The Fund will typically have exposure to long and short positions across all four major asset classes (commodities, currencies, fixed income and equities), but at any one time the Fund may emphasize certain asset classes or certain exposures within an asset class. The Fund may enter into hedging transactions to seek to manage portfolio risk. The Fund will also invest in fixed income securities to seek income, as margin or collateral for other Fund investments, and for liquidity purposes.

To implement its strategy, the Fund uses fully automated, proprietary, computerized trading systems that examine a broad array of investments around the world and seek to identify market patterns that offer attractive investment opportunities. Superfund Advisors Inc.’s (“Superfund” or the “Adviser”) trading strategy analyzes data from more than 120 different futures and forward markets worldwide on an ongoing basis and also analyzes risks related to position size, market correlation, and market volatility of potential investments. The Adviser seeks to identify investments through a four-point philosophy that takes into account (1) market diversification, (2) technical analysis, (3) trading models incorporating trend following, pattern recognition, volatility, momentum and counter-trend strategies and (4) money management. The Adviser seeks to identify opportunities to capitalize on trends and market fluctuations in both the short- and long-term in the futures markets. These investment opportunities may last from days to months.

The Fund will invest in a variety of derivative instruments including futures and option contracts, forward contracts, and swaps, including total return swaps. The Fund may invest in both exchange-traded derivatives and over the counter (“OTC”) derivatives. In addition to investing directly in derivatives and other types of investments, the Fund may also gain exposure to futures markets through investments in the Superfund Managed Futures Strategy (Cayman) Fund Ltd., a wholly-owned subsidiary of the Fund organized under the laws of the Cayman Islands (the “Subsidiary”). The Fund intends to make investments through the Subsidiary and may invest up to 25% of its total assets in the Subsidiary.

To the extent the Fund invests in commodity-linked derivatives, it will do so primarily through the Subsidiary. Generally, the Subsidiary will invest primarily in commodity futures, either directly or by entering into total return swap agreements tied to commodity futures, but it may also invest in financial futures, options, other swap contracts, fixed income securities, pooled investment vehicles, including those that are not registered pursuant to the Investment Company Act of 1940, as amended (the “1940 Act”), and other investments intended to serve as margin or collateral for the Subsidiary’s derivative positions.

Although the Fund normally does not engage in any direct borrowing, leverage is inherent in the derivatives it trades. Leverage magnifies exposure to the swings in prices of the reference asset underlying a derivative and results in increased volatility, which means the Fund will generally have the potential for greater gains, as well as the potential for greater losses, than a fund that does not use derivatives.

The fixed-income securities in which the Fund may invest may have any maturity and may include, corporate bonds and other corporate debt securities, asset-backed securities, securities issued by the U.S. government or its agencies and instrumentalities, securities issued by non-U.S. governments or their agencies and instrumentalities, money market securities and other interest-bearing instruments or any derivative instrument meant to track the return of any such instrument, and cash.

The Adviser generally expects that the Fund’s performance will have a low correlation to the performance of the general global equity, fixed income, currency and commodity markets; however, the Fund’s performance may correlate to the performance of any one or more of those markets over short-term periods.

The Fund may engage in active and frequent trading.

Principal Investment Risks: As with all mutual funds, there is the risk that you could lose money through your investment in the Fund. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. Many factors affect the Fund’s net asset value and performance. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

The Fund may be subject to the risks described below through its own direct investments and indirectly through investments in derivatives.

As with any fund, there is no guarantee that the Fund achieve its goal.

- *Management Risk.* The net asset value of the Fund changes daily based on the performance of the securities and derivatives in which it invests. Management risk includes the risk that the quantitative model used by the Fund's investment adviser may not perform as expected and/or may not be successful in determining the investment positions or weighting that will enable the Fund to achieve its investment objective, particularly in volatile markets.
- *Model Risk.* The Fund will use model-based strategies that, while historically effective, may not be successful on an ongoing basis or could contain unknown errors. Any imperfections or limitations in a model could affect the ability of the manager to implement strategies. By necessity, models make simplifying assumptions that limit their efficacy. Models relying on historical market data can fail to predict future market events. Further, the data used in models may be inaccurate and/or it may not include the most recent information about a company or a security. In addition, computer programming used to create quantitative models, or the data on which such models operate, might contain one or more errors. Such errors might never be detected, or might be detected only after the Fund has sustained a loss (or reduced performance) related to such errors. Moreover, an increasing number of market participants may rely on models that are similar to those used by the Adviser, which may result in a substantial number of market participants taking the same action with respect to an investment. Should one or more of these other market participants begin to divest themselves of one or more portfolio holdings, the Fund could suffer significant losses. In addition, changes in underlying market conditions can adversely affect the performance of a model.
- *Market Risk.* Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond or other markets, volatility in the equities or other securities markets, or adverse investor sentiment and political events affect the securities markets. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future. Securities markets also may experience long periods of decline in value. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

- *Derivatives Risk.* The derivative instruments in which the Fund may invest, including futures, forwards, options, swaps, including total return swaps, repurchase agreements and other similar instruments, may be more volatile than other instruments and may be subject to unanticipated market movements, which are potentially unlimited. The risks associated with investments in derivatives also include liquidity, interest rate, market, credit and management risks, mispricing or improper valuation. Certain derivatives require the Fund to make margin payments and the Fund may have to post additional margin if the value of the derivative position changes in a manner adverse to the Fund. Changes in the market value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager.
- *Forward and Futures Contract Risk.* The successful use of forward and futures contracts draws upon the Adviser's skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, including increases to margin requirements by futures commission merchants as a result of market conditions or periods of high volatility, and the Fund may have to sell securities at a time when it may be disadvantageous to do so. The Fund could be unable to recover assets held at the futures clearing broker, even assets directly traceable to the Fund from the futures clearing broker in the event of a bankruptcy of the broker. A counterparty to a forward and futures contract may also increase its collateral or margin requirements, due to regulatory requirements or otherwise, which may limit or restrict the Fund's ability to use, or increase the cost to the Fund of, leverage and thereby reduce the Fund's investment returns.

- *Leveraging Risk.* The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may increase expenses and increase the impact of the Fund's other risks. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations, to meet additional margin requirements or to meet regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.
- *Volatility Risk.* The Fund's investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund's portfolio may fluctuate due to factors that affect markets generally or that affect a particular industry or sector. The value of an investment in the Fund's portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund's net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.
- *Counterparty Credit Risk.* The stability and liquidity of many derivative transactions depends in large part on the creditworthiness of the parties to the transactions. If a privately negotiated over-the-counter contract calls for payments by the Fund, the Fund must be prepared to make such payments when due. In addition, if a counterparty's creditworthiness declines or if a counterparty becomes the subject of insolvency proceedings, the Fund may not receive payments owed under the contract, or such payments may be delayed under such circumstances and the value of agreements with such counterparty can be expected to decline, potentially resulting in losses to the Fund. The Adviser considers factors such as counterparty credit ratings and financial statements among others when determining whether a counterparty is creditworthy. The Adviser regularly monitors the creditworthiness of each counterparty with which the Fund enters into a transaction. In addition, the Fund may enter into derivative transactions with a limited number of counterparties, which may increase the Fund's exposure to counterparty risk. There is the risk that a counterparty refuses to continue to enter into derivative transactions with the Fund in the future, or requires increased fees, which could impair the Fund's ability to achieve its investment objective. A derivative counterparty may also increase its collateral or margin requirements, due to regulatory requirements or otherwise, which may limit or restrict the Fund's ability to use, or increase the cost to the Fund of, leverage and thereby reduce the Fund's investment returns. If the Fund is not able to enter into a particular derivatives transaction, the Fund's investment performance and risk profile could be adversely affected as a result.
- *Active Trading Risk.* A higher portfolio turnover due to active and frequent trading will result in higher transaction and brokerage costs.
- *Asset-Backed Securities Risk.* The risks of investing in asset-backed securities include prepayment risk, extension risk, interest rate risk, market risk and management risk.
- *Call Option Risk.* When the Fund purchases a call option on a security or index it may lose the entire premium paid if the underlying security or index does not increase in value.
- *Commodities Risk.* Exposure to commodities markets may subject the Fund to greater volatility than investments in traditional securities. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. The prices of energy, industrial metals, precious metals, agriculture, and livestock sector commodities may fluctuate widely due to factors such as changes in value, supply and demand and governmental regulatory policies. The commodity-linked securities in which the Fund invests may be issued by companies in the financial services sector, and events affecting the financial services sector may cause the Fund's share value to fluctuate.
- *Credit Risk.* The risk that the Fund could lose money if the issuer or guarantor of a fixed income security is unwilling or unable to make timely payments to meet its contractual obligations on investments held by the Fund. Changes in the credit rating of a debt security held by the Fund may have a similar effect.
- *Currency Risk.* The risk that foreign currencies will decline in value relative to the U.S. dollar and adversely affect the value of the Fund's investments in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, or in derivatives that provide exposure to, foreign (non-U.S.) currencies.
- *Cybersecurity Risk.* There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the investment adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries ("Service Providers") to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its Service Providers may adversely impact the Fund or its shareholders.

- *Emerging Markets Risk.* Investing in emerging markets involves not only the risks described herein with respect to investing in foreign securities, but also other risks, including exposure to economic structures that are generally less diverse and mature, and to political systems that can be expected to have less stability than those of developed countries. The typically small size of the markets may also result in a lack of liquidity and in price volatility of these securities. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluation, which adversely affect returns to U.S. investors. In addition, emerging financial markets have far lower trading volumes and less liquidity than developed markets. The legal remedies for investors in emerging markets may be more limited than the remedies available in the U.S., and the ability of U.S. authorities (e.g., SEC and the U.S. Department of Justice) to bring actions against bad actors may be limited.
- *Expense Waiver Risk.* The Adviser has agreed to waive all of the Fund's unitary management fee and to absorb the Fund's expenses (excluding front-end or contingent deferred loads; brokerage fees and commissions; borrowing costs, such as interest and dividend expense on securities sold short; taxes; and extraordinary expenses, such as litigation expenses) through February 28, 2023. There can be no assurance that the Adviser will continue to waive all or any portion of the unitary management fee and/or absorb Fund expenses beyond that date. Therefore, the fees and expenses applicable to your investment could increase significantly in the future.
- *Equity Risk.* Equity securities are susceptible to general market fluctuations, volatile increases and decreases in value as market confidence in and perceptions of their issuers change and unexpected trading activity among retail investors. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or to changing economic, political or market conditions.
- *Fixed Income Risk.* When the Fund invests in fixed income securities or derivatives, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities or derivatives owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Risks associated with rising interest rates are heightened given that interest rates in the U.S. currently remain near historic lows. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity may decline unpredictably in response to overall economic conditions or credit tightening. For example, a general rise in interest rates may cause investors to move out of fixed income securities on a large scale, which could adversely affect the price and liquidity of fixed income securities and could also result in increased redemptions for the Fund.
- *Foreign (Non-U.S.) Investment Risk.* Foreign (non-U.S.) securities present greater investment risks than investing in the securities of U.S. issuers and may experience more rapid and extreme changes in value than the securities of U.S. companies, due to less information about foreign (non-U.S.) companies in the form of reports and ratings than about U.S. issuers; different accounting, auditing and financial reporting requirements; smaller markets; nationalization; expropriation or confiscatory taxation; currency blockage; or political changes or diplomatic developments. Foreign (non-U.S.) securities may also be less liquid and more difficult to value than securities of U.S. issuers.
- *Gap Risk.* The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit from the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk.
- *Hedging Transactions Risk.* The Adviser from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Because the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs.
- *Index Risk.* If a derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.
- *Issuer-Specific Risk.* The value of a specific security can be more volatile than the market as a whole and may perform worse than the market as a whole.

- *LIBOR Risk.* The Fund may invest in securities and other instruments whose interest payments are determined by references to the London Interbank Offered Rate (“LIBOR”). In 2017, the United Kingdom Financial Conduct Authority, which regulates LIBOR, announced it would cease its active encouragement of banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration Limited, the administrator of LIBOR, ceased publication of certain LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of the remaining LIBOR settings on a representative bases after June 30, 2023. The U.S. Federal Reserve has begun publishing a Secured Overnight Financing Rate (SOFR), a broad measure of secured overnight U.S. Treasury repo rates, that is intended to replace U.S. dollar LIBOR. The unavailability of LIBOR presents risks to the Fund, including the risk that any pricing or adjustments to the Fund’s investments resulting from a substitute or alternate reference rate may adversely affect the Fund’s performance and/or NAV. It remains uncertain how such changes would be implemented and the effects such changes would have on the Fund, including any negative effects on the Fund’s liquidity and valuation of the Fund’s investments, issuers of instruments in which the Fund invests and financial markets generally.
- *Liquidity Risk.* Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. In the past, in stressed markets, certain types of securities suffered periods of illiquidity if disfavored by the market. All of these risks may increase during periods of market turmoil, such as that experienced in 2020 with COVID-19, and could have a negative effect on the Fund’s performance.
- *Market Events Risk.* There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.
- *Put Option Risk.* When the Fund purchases a put on a security or index it may lose the entire premium paid if the underlying security or index does not decrease in value.
- *Regulatory Risk.* Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund. For example, the SEC recently adopted regulations that subject activities of mutual funds trading certain derivative instruments to additional regulation, which may increase the operating expenses of the Fund and impair the Fund’s ability to achieve its investment objective.
- *Short Sales Risk.* The risk on a short sale is the risk of loss if the value of a security sold short increases prior to the delivery date, since the Fund must pay more for the security than it received from the purchaser in the short sale. Therefore, the risk of loss may be unlimited, whereas the potential loss on long positions is limited to the original purchase price. Any strategy that includes selling securities short could suffer significant losses. Shorting will also result in higher transaction costs (such as interest and dividends), which reduce the Fund’s return, and may result in higher taxes.
- *Sovereign Debt Risk.* Sovereign debt instruments are subject to the risk that a governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt.
- *Subsidiary Risk.* By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary’s investments. The commodity-related instruments held by the Subsidiary are generally similar to those that are permitted to be held by the Fund and are subject to the same risks that apply to similar investments if held directly by the Fund (see “Commodities Risk” above). The Subsidiary is not registered under the 1940 Act, and, unless otherwise noted in this prospectus, is not subject to all the investor protections of the 1940 Act. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as described in this prospectus and the SAI and could adversely affect the Fund.
- *Tax Risk.* The federal income tax treatment of the complex securities in which the Fund may invest may not be clear or may be subject to recharacterization by the Internal Revenue Service (“IRS”). It could be more difficult to comply with the tax requirements applicable to regulated investment companies if the tax characterization of investments or the tax treatment of the income from such investments were successfully challenged by the IRS. Any such failure to comply with the rules applicable to regulated investment companies could make it more difficult for the Fund itself to comply with such rules. Furthermore, the ability of the Fund to gain commodity exposure as contemplated may be adversely affected by future legislation, regulatory developments, interpretive guidance or other actions by the IRS or the Treasury Department. Pursuant to guidance issued by the Treasury Department and the IRS, the Subsidiary’s commodity related income for a taxable year may be treated as qualifying income to the extent the Subsidiary actually distributes such income out of its earnings and profits to the Fund for such taxable year or if such income constitutes other income derived with respect to the Fund’s business of investing in stock, securities, or currencies.

- *U.S. Government Securities Risk.* Treasury obligations may differ in their interest rates, maturities, times of issuance and other characteristics. Obligations of U.S. Government agencies and authorities are supported by varying degrees of credit but generally are not backed by the full faith and credit of the U.S. Government. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. In addition, the value of U.S. Government securities may be affected by changes in the credit rating of the U.S. Government.
- *Valuation Risk.* The sale price that the Fund could receive for a portfolio security may differ from the Fund's valuation of the security, particularly for securities that trade in low volume or volatile markets or that are valued using a fair value methodology. In addition, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's shares.
- *Written/Sold Options Risk.* The Fund will incur a loss as a result of a written option (also referred to as a short position) if the price of the written option instrument increases in value between the date when the Fund write the option and the date on which the Fund purchases an offsetting position. The Fund's losses are potentially large in a written put transaction and potentially unlimited in a written call transaction.

Performance: The bar chart and performance table below show the variability of the Fund's returns, which is some indication of the risks of investing in the Fund. The bar chart shows performance of the Fund's Class I shares for each calendar year since the Fund's inception. Returns for Class A shares, which are not presented, will vary from the returns of Class I shares. Class A shares are invested in the same portfolio of securities and the annual returns differ from Class I shares only to the extent that the Classes do not have the same expenses. Sales loads or account fees are not reflected in the bar chart. If these amounts were reflected, returns would be less than those shown. The performance table compares the performance of the Fund's shares over time to the performance of a broad-based market index. You should be aware of the Fund's past performance (before and after taxes) may not be an indication of how the Fund will perform in the future. Updated performance information is available at no cost by calling 1-855-61-SUPER. Class C shares had not commenced operations as of the date of this prospectus.

Performance Bar Chart for Calendar Years Ended December 31st:

Highest Quarter:	12/31/2017	13.83%
Lowest Quarter:	12/31/2016	-7.57%

**Performance Table Average Annual Total Returns
(For the year ended December 31, 2021)**

Class I Shares	One Year	Five Years	Since Inception⁽¹⁾
Return before taxes	10.54%	12.50%	6.12%
Return after taxes on Distributions	3.25%	7.79%	2.97%
Return after taxes on Distributions and Sale of Fund Shares	6.94%	7.88%	3.41%
Class A Shares	One Year	Five Years	Since Inception⁽¹⁾
Return before taxes	4.24%	11.05%	5.19%
Bank of America Merrill Lynch 3-Month Treasury Bill Index ⁽²⁾ (reflects no deduction for fees, expenses or taxes)	0.05%	1.14%	0.76%

(1) The Fund commenced operations on December 31, 2013.

(2) The Bank of America Merrill Lynch 3-Month U.S. Treasury Bill Index is an index of short-term U.S. Government securities with a remaining term to final maturity of less than three months. Investors cannot invest directly in an index, and index performance does not reflect deductions for fees, expenses or taxes. Index returns are gross of any fees, brokerage commissions or other expenses of investing.

After-tax returns are shown for Class I shares only, and after-tax returns for other classes of shares will vary. After-tax returns were calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Investment Adviser: Superfund Advisors Inc. serves as investment adviser to the Fund.

Portfolio Manager: The portfolio manager of the Fund is Tennyson Briggs. Mr. Briggs is the Director of Superfund Advisors, Inc. and has managed the Fund since August 2021.

Purchase and Sale of Fund Shares: You may purchase and redeem shares of the Fund on any day that the New York Stock Exchange is open for trading by written request, by telephone at 1-855-61-SUPER, or through your broker. Redemptions will be paid by automated clearing house funds ("ACH"), check or wire transfer. The Fund or its Adviser may waive any of the minimum initial and subsequent investment amounts.

Class	Minimum Investment	
	Initial	Subsequent
A	\$2,500	\$500
C	\$2,500	\$500
I	\$100,000	\$1,000

Tax Information: Dividends and capital gain distributions you receive from the Fund, whether you reinvest your distributions in additional Fund shares or receive them in cash, are taxable to you at either ordinary income or capital gains tax rates unless you are investing through a tax-deferred plan such as an IRA or 401(k) plan.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies, including the Adviser, may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT INVESTMENT OBJECTIVE, PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

Investment Objective: The Fund seeks positive absolute returns. The Fund's investment objective may be changed by the Fund's Board of Trustees upon 60 days, prior written notice to shareholders.

Principal Investment Strategies: To pursue its investment objective, the Fund uses a managed futures strategy and principally invests in U.S. and international, including emerging market, commodity and financial futures and foreign currency markets. The Fund seeks investment opportunities across many market sectors, including: currencies, interest rates, bonds, stock indices, metals, energy, grains and agricultural sectors. The Fund will typically have exposure to long and short positions across all four major asset classes (commodities, currencies, fixed income and equities), but at any one time the Fund may emphasize certain asset classes or certain exposures within an asset class. The Fund may enter into hedging transactions to seek to manage portfolio risk. The Fund will also invest in fixed income securities to seek income, as margin or collateral for other Fund investments, and for liquidity purposes.

To implement its strategy, the Fund uses fully automated, proprietary, computerized trading systems that examine a broad array of investments around the world and seek to identify market patterns that offer attractive investment opportunities. The Adviser's trading strategy analyzes data from more than 120 different futures and forward markets worldwide on an ongoing basis and also analyzes risks related to position size, market correlation, and market volatility of potential investments. The Adviser seeks to identify investments through a four-point philosophy that takes into account (1) market diversification, (2) technical analysis, (3) trading models incorporating trend following, pattern recognition, volatility, momentum and counter-trend strategies and (4) money management. The Adviser seeks to identify opportunities to capitalize on trends and market fluctuations in both the short- and long-term in the futures markets. These investment opportunities may last from days to months.

The Fund will invest in a variety of derivative instruments including futures and option contracts, forward contracts, and swaps, including total return swaps. The Fund may invest in both exchange-traded derivatives and over the counter ("OTC") derivatives. In addition to investing directly in derivatives and other types of investments, the Fund may also gain exposure to futures markets through investments in the Superfund Managed Futures Strategy (Cayman) Fund Ltd., a wholly-owned subsidiary of the Fund organized under the laws of the Cayman Islands (the "Subsidiary"). The Fund intends to make investments through the Subsidiary and may invest up to 25% of its total assets in the Subsidiary.

To the extent the Fund invests in commodity-linked derivatives, it will do so primarily through the Subsidiary. Generally, the Subsidiary will invest primarily in commodity futures, either directly or by entering into total return swap agreements tied to commodity futures, but it may also invest in financial futures, options, other swap contracts, fixed income securities, pooled investment vehicles, including those that are not registered pursuant to the 1940 Act, and other investments intended to serve as margin or collateral for the Subsidiary's derivative positions.

The Fund will invest in the Subsidiary in order to gain exposure to the commodities markets within the limitations of the federal tax laws, rules and regulations that apply to registered investment companies. Unlike the Fund: (i) the Subsidiary will not seek to qualify as a regulated investment company under Subchapter M of the Code; and (ii) the Subsidiary may invest without limitation in commodity-linked derivatives, however, the Subsidiary will comply with the same 1940 Act asset coverage requirements with respect to its investments in commodity-linked derivatives that are applicable to the Fund's transactions in derivatives. The Fund is the sole shareholder of the Subsidiary and does not expect shares of the Subsidiary to be offered or sold to other investors.

To the extent applicable to the investment activities of the Subsidiary, the Adviser will manage the Subsidiary pursuant to compliance policies and procedures that are the same, in all material respects, as the policies and procedures adopted by the Fund. As a result, the Adviser, in managing the Subsidiary's portfolio, is subject to the same investment policies and restrictions that apply to the management of the Fund, and, in particular, to the requirements relating to portfolio leverage, liquidity, brokerage, and the timing and method of the valuation of the Subsidiary's portfolio investments and shares of the Subsidiary. These policies and restrictions are described in detail in the Fund's Statement of Additional Information.

Although the Fund normally does not engage in any direct borrowing, leverage is inherent in the derivatives it trades. Leverage magnifies exposure to the swings in prices of the reference asset underlying a derivative and results in increased volatility, which means the Fund will generally have the potential for greater gains, as well as the potential for greater losses, than a fund that does not use derivatives.

The fixed-income securities in which the Fund invests may have any maturity and may include corporate bonds and other corporate debt securities, asset-backed securities, securities issued by the U.S. government or its agencies and instrumentalities, securities issued by non-U.S. governments or their agencies and instrumentalities, money market securities and other interest-bearing instruments or any derivative instrument meant to track the return of any such instrument, and cash.

In response to market, economic, political or other conditions, the Fund may temporarily use a different investment strategy for defensive purposes. Such a strategy could include investing up to 100% of the Fund's assets in cash or cash equivalent securities such as U.S. Treasury securities and money market mutual funds. Defensive investing could affect the Fund's performance and the Fund might not achieve its investment objectives. The Fund may also invest a substantial portion of its assets in such instruments at any time to maintain liquidity or pending selection of investments in accordance with its policies.

The Adviser generally expects that the Fund's performance will have a low correlation to the performance of the general global equity, fixed income, currency and commodity markets; however, the Fund's performance may correlate to the performance of any one or more of those markets over short-term periods. The Fund is not a complete investment program and should be considered only as one part of an investment portfolio. The Fund is more appropriate for long-term investors who can bear the risk of short-term net asset value ("NAV") fluctuations, which at times, may be significant and rapid.

The Fund is actively managed and may engage in frequent trading.

Principal Risk Factors

As with all funds, there is the risk that you could lose money through your investment in the Fund. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The Adviser cannot guarantee that the Fund will achieve its objectives. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. Many factors affect the Fund's net asset value and performance. It is important that investors closely review and understand these risks before making an investment in the Fund. Additional information regarding the principal and certain other risks of investing in the Fund is provided below. The Fund's Statement of Additional Information ("SAI"), which is incorporated by reference into this Prospectus, includes more information about the Fund and its investments and risks. The risks described in this Prospectus (and in the SAI) are not intended to include every potential risk of investing in the Fund. The Fund could be subject to additional risks because the types of investments it makes may change over time.

The following section provides additional information regarding certain of the principal risks identified under "Principal Risk Factors" in the Fund's summary along with additional risk information. The Fund may be subject to the risks described below directly through its own investments and indirectly through its exposure from its investments in derivative instruments.

- *Active Trading Risk.* A higher portfolio turnover may result in higher transaction and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains and losses, which may affect the taxes you pay as a Fund shareholder.
- *Asset-Backed Securities Risk.* The risks of investing in asset-backed securities include prepayment risk, extension risk, interest rate risk, market risk and management risk, which are more fully discussed below. If interest rates fall, the underlying debt may be repaid early, reducing the value of the Fund's investments. On the other hand, if interest rates rise, the duration of the securities may be extended, making them more sensitive to changes in interest rates. Furthermore, fewer prepayments may be made, which would cause the average bond maturity to rise, increasing the potential for the Fund to lose money. The value of asset-backed securities may be considerably affected by changes in interest rates, the market's perception of issuers, declines in the value of collateral, and the creditworthiness of the parties involved. The ability of the Fund to successfully utilize these instruments may depend on the ability of the Fund's Adviser to forecast interest rates and other economic factors correctly.
- *Call Option Risk.* When the Fund purchases a call option on a security or index it may lose the entire premium paid if the underlying security or index does not increase in value.
- *Commodities Risk.* Exposure to commodities markets may subject the Fund to greater volatility than investments in traditional securities. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. The prices of energy, industrial metals, precious metals, agriculture and livestock sector commodities may fluctuate widely due to factors such as changes in value, supply and demand and governmental regulatory policies. The Organization of Petroleum Exporting Countries ("OPEC") and other oil-producing countries may agree to reduce production as they did in 2020 in response to the COVID-19 pandemic. An extended period of reduced production and continued price volatility may significantly lengthen the time the energy sector would need to recover after a stabilization of prices. The energy sector can be significantly affected by changes in the prices and supplies of oil and other energy fuels, energy conservation, the success of exploration projects, and tax and other government regulations, policies of OPEC and relationships among OPEC members and between OPEC and oil importing nations. The metals sector can be affected by sharp price volatility over short periods caused by global economic, financial and political factors, resource availability, government regulation, economic cycles, changes in inflation or expectations about inflation in various countries, interest rates, currency fluctuations, metal sales by governments, central banks or international agencies, investment speculation and fluctuations in industrial and commercial supply and demand. The commodity-linked securities in which the Fund invests may be issued by companies in the financial services sector, including the banking, brokerage and insurance sectors. As a result, events affecting issuers in the financial services sector may cause the Fund's share value to fluctuate.

- *Counterparty Credit Risk.* The stability and liquidity of repurchase agreements, swap transactions, forwards and over-the-counter derivative transactions depend in large part on the creditworthiness of the parties to the transactions. It is expected that the Adviser will monitor the creditworthiness of firms with which it will cause the Fund to enter into repurchase agreements, interest rate swaps, caps, floors, collars or over-the-counter derivatives. The stability and liquidity of many derivative transactions depends in large part on the creditworthiness of the parties to the transactions. If there is a default by the counterparty to such a transaction, the Fund will under most normal circumstances have contractual remedies pursuant to the agreements related to the transaction. However, exercising such contractual rights may involve delays or costs which could result in the value of the Fund being less than if the transaction had not been entered into. Furthermore, there is a risk that any of such counterparties could become insolvent and/or the subject of insolvency proceedings. If one or more of the Fund's counterparties were to become insolvent or the subject of insolvency proceedings in the United States (either under the Securities Investor Protection Act or the United States Bankruptcy Code), there exists the risk that the recovery of such vehicle's securities and other assets from such prime broker or broker-dealer will be delayed or be of a value less than the value of the securities or assets originally entrusted to such prime broker or broker-dealer.

There is the risk that a counterparty refuses to continue to enter into derivative transactions with the Fund in the future, or requires increased fees, which could impair the Fund's ability to achieve its investment objective. A counterparty may also increase its collateral or margin requirements, due to regulatory requirements or otherwise, which may limit or restrict the Fund's ability to use, or increase the cost to the Fund of, leverage and thereby reduce the Fund's investment returns. If the Fund is not able to enter into a particular derivatives transaction, the Fund's investment performance and risk profile could be adversely affected as a result.

In addition, the Fund may use counterparties located in jurisdictions outside the United States. Such local counterparties are subject to the laws and regulations in non-U.S. jurisdictions that are designed to protect their customers in the event of their insolvency. However, the practical effect of these laws and their application to the Fund's assets are subject to substantial limitations and uncertainties. Because of the large number of entities and jurisdictions involved and the range of possible factual scenarios involving the insolvency of a counterparty, it is impossible to generalize about the effect of their insolvency on the Fund and its assets. Shareholders should assume that the insolvency of any counterparty would result in a loss to the Fund, which could be material. If the Fund obtains exposure to an investment directly through the use of one or more total return swaps, those investments will be subject to counterparty risk.

- *Credit Risk.* The risk that issuers or guarantors of a fixed income security cannot or will not make payments on the securities and other investments held by the Fund may result in losses to the Fund. Changes in the credit rating of a debt security or of the issuer of a debt security held by the Fund could have a similar effect. In addition, the credit quality of securities held by the Fund may be lowered if an issuer's financial condition changes, which may lower their value and may affect their liquidity. Generally, the lower the credit rating of a security, the greater the risk that the issuer of the security will default on its obligation. High quality securities are generally believed to have relatively low degrees of credit risk. The Fund intends to enter into financial transactions with counterparties that are creditworthy at the time of the transactions. There is always the risk that the Investment Adviser's analysis of creditworthiness is incorrect or may change due to market conditions. To the extent that the Fund focuses its transactions with a limited number of counterparties, it will be more susceptible to the risks associated with one or more counterparties.
- *Currency Risk.* The risk that foreign currencies will decline in value relative to the U.S. dollar and adversely affect the value of the Fund's investments in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, or in derivatives that provide exposure to, foreign (non-U.S.) currencies. Currency risk may be particularly high to the extent that the Fund invests in foreign (non-U.S.) currencies or engages in foreign currency transactions that are economically tied to emerging market countries.
- *Cybersecurity Risk.* There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund or its Service Providers to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund, or its Service Providers may adversely impact the Fund or its shareholders. Because information technology ("IT") systems and digital data underlie most of the Fund's operations, the Fund and its Service Providers are exposed to the risk that their operations and data may be compromised as a result of internal and external cyber-failures, breaches or attacks ("Cyber Risk"). This could occur as a result of malicious or criminal cyber-attacks. Cyber-attacks include actions taken to: (i) steal or corrupt data maintained online or digitally, (ii) gain unauthorized access to or release confidential information, (iii) shut down the Fund or Service Provider website through denial-of-service attacks, or (iv) otherwise disrupt normal business operations. However, events arising from human error, faulty or inadequately implemented policies and procedures or other systems failures unrelated to any external cyber-threat may have effects similar to those caused by deliberate cyber-attacks.

The computer systems, networks and devices used by the Fund and its Service Providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its Service Providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach. The Fund and the Adviser have limited ability to prevent or mitigate cybersecurity incidents affecting third-party Service Providers.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its net asset value; impediments to trading; the inability of the Fund and its Service Providers to transact business; prevention of Fund investors from purchasing, redeeming or exchanging shares or receiving distributions; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

- *Derivatives Risk.* The Fund may invest in derivatives, which are financial instruments whose value is typically based on the value of a security, commodity or index. These instruments include options, futures contracts, forward currency contracts, swap agreements, including total return swap agreements, futures related instruments including, but not limited to, equity index futures, swaps on equity index futures, currency forwards, commodity futures, swaps on commodity futures, fixed income futures, bond futures and swaps on bond futures and similar instruments. Derivatives may also include customized baskets or options (which may incorporate other securities directly and also various derivatives including common stock, options, and futures) structured as agreed upon by a counterparty, as well as specially structured types of mortgage- and asset-backed securities whose value is often linked to commercial and residential mortgage portfolios. The Fund's use of derivative instruments involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments, and certain derivatives may create a risk of loss greater than the amount invested. Certain derivatives require the Fund to make margin payments, a form of security deposit intended to protect against nonperformance of the derivative contract, and the Fund may have to post additional margin if the value of the derivative position changes in a manner adverse to the Fund.

Investing for hedging purposes or to increase the Fund's return may result in certain additional transaction costs that may reduce the Fund's performance. The Fund may use a variety of currency hedging techniques to attempt to hedge exchange rate risk or gain exposure to a particular currency. When used for hedging purposes, no assurance can be given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged. Because the markets for certain derivative instruments are relatively new, suitable derivatives transactions may not be available in all circumstances for risk management or other purposes and there can be no assurance that a particular derivative position will be available when sought by the Adviser or that such techniques will be utilized by the Adviser.

The market value of derivative instruments and securities may be more volatile than that of other instruments and may be subject to unanticipated market movements, which are potentially unlimited. Each type of derivative instrument may have its own special risks, including the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates, and indices. Many derivatives, in particular privately negotiated derivatives, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the Fund. The value of derivatives may not correlate perfectly, or at all, with the value of the assets, reference rates or indices they are designed to closely track.

Derivatives are subject to a number of other risks, including liquidity risk (the possibility that the derivative may be difficult to purchase or sell and the Adviser may be unable to initiate a transaction or liquidate a position at an advantageous time or price), leverage risk (the possibility that adverse changes in the value or level of the underlying asset, reference rate or index can result in loss of an amount substantially greater than the amount invested in the derivative), interest rate risk (some derivatives are more sensitive to interest rate changes and market price fluctuations), and counterparty risk (the risk that a counterparty may be unable to perform according to a contract, and that any deterioration in a counterparty's creditworthiness could adversely affect the instrument). In addition, because derivative products are highly specialized, investment techniques and risk analyses employed with respect to investments in derivatives are different from those associated with stocks and bonds. Finally, the Fund's use of derivatives may cause the Fund to realize higher amounts of short-term capital gains (generally taxed at ordinary income tax rates) than if the Fund had not used such instruments. Derivative instruments are also subject to the risk that the market value of an instrument will change to the detriment of the Fund. If the Adviser inaccurately forecast the values of securities, currencies or interest rates or other economic factors in using derivatives, the Fund might have been in a better position if it had not entered into the transaction at all. Some strategies involving derivative instruments can reduce the risk of loss, but they can also reduce the opportunity for gain or result in losses by offsetting favorable price movements in other investments held by the Fund. The Fund may also have to buy or sell a security at a disadvantageous time or price because regulations require funds to maintain offsetting positions or asset coverage in connection with certain derivatives transactions.

The Fund's SAI provides a more detailed description of the types of derivative instruments in which the Fund may invest and their associated risks.

- *Emerging Markets Risk.* The Fund’s investments in emerging market countries are subject to all of the risks of foreign investing generally, and have additional heightened risks due to a lack of established legal, political, business and social frameworks to support securities markets. These risks include less social, political and economic stability; smaller securities markets with low or nonexistent trading volume and greater illiquidity and price volatility; more restrictive national policies on foreign investment, including restrictions on investment in issuers or industries deemed sensitive to national interests; less transparent and established taxation policies; less developed regulatory or legal structures governing private and foreign investment; more pervasiveness of corruption and crime; less financial sophistication, creditworthiness and/or resources possessed by, and less government regulation of, the financial institutions and issuers with which the Fund transacts; less government supervision and regulation of business and industry practices, stock exchanges, brokers and listed companies than in the U.S.; greater concentration in a few industries resulting in greater vulnerability to regional and global trade conditions; higher rates of inflation and more rapid and extreme fluctuations in inflation rates; greater sensitivity to interest rate changes; increased volatility in currency exchange rates and potential for currency devaluations and/or currency controls; greater debt burdens relative to the size of the economy; more delays in settling portfolio transactions and heightened risk of loss from share registration and custody practices; and less assurance that recent favorable economic developments will not be slowed or reversed by unanticipated economic, political or social events in such countries. Because of these risk factors, the Fund’s investments in developing market countries are subject to greater price volatility and illiquidity than investments in developed markets. Governments of emerging market and frontier market countries may own or control parts of the private sector. Accordingly, government actions could have a significant impact on economic conditions. Certain emerging market and frontier market countries require governmental approval prior to investments by foreign persons, limit the amount of investment by foreign persons in a particular sector and/or company, limit the investment by foreign persons to a specific class of securities of an issuer that may have less advantageous rights than a domestically available class, require foreign investors to maintain a trading account with only one licensed securities company in the relevant market and/or impose additional taxes on foreign investors. These may contribute to the illiquidity of the relevant securities market, as well as create inflexibility and uncertainty as to the trading environment. The legal remedies for investors in emerging markets may be more limited than the remedies available in the U.S., and the ability of U.S. authorities (e.g., SEC and the U.S. Department of Justice) to bring actions against bad actors may be limited.
- *Equity Risk.* Equity securities are susceptible to general market fluctuations volatile increases and decreases in value as market confidence in and perceptions of their issuers change and unexpected trading activity among retail investors. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or changing economic, political or market conditions.
- *Expense Waiver Risk.* The Adviser has agreed to waive all of the Fund’s unitary management fee and to absorb the Fund’s expenses (excluding front-end or contingent deferred loads; brokerage fees and commissions; borrowing costs, such as interest and dividend expense on securities sold short; taxes; and extraordinary expenses, such as litigation expenses) through February 28, 2023. There can be no assurance that the Adviser will continue to waive all or any portion of the unitary management fee and/or absorb Fund expenses beyond that date. Therefore, the fees and expenses applicable to your investment could increase significantly in the future.
- *Fixed Income Securities Risk.* Fixed income securities held by the Fund are subject to interest rate risk, call risk, prepayment and extension risk, credit risk, duration risk and liquidity risk, which are more fully described below. In addition, current market conditions may pose heightened risks for fixed income securities. The Fund may lose money if short-term or long-term interest rates rise sharply in a manner not anticipated by Fund management. When the Fund invests in fixed income securities or derivatives, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities or derivatives owned by the Fund. In general, the market price of fixed income securities with longer maturities or durations will increase or decrease more in response to changes in interest rates than shorter-term securities. Risks associated with rising interest rates are heightened given that interest rates in the U.S. currently remain near historic lows. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund’s share price and total return to be reduced and fluctuate more than other types of investments. Moreover, new regulations applicable to and changing business practices of financial intermediaries that make markets in fixed income securities may result in those financial intermediaries restricting the market marking activities for certain fixed income securities, which may reduce the liquidity and increase the volatility for such fixed income securities. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity may decline unpredictably in response to overall economic conditions or credit tightening. For example, a general rise in interest rates may cause investors to move out of fixed income securities on a large scale, which could adversely affect the price and liquidity of fixed income securities and could also result in increased redemptions for the Fund. Duration risk arises when holding long duration and long maturity investments, which will magnify certain risks, including interest rate risk and credit risk.
 - *Call Risk.* During periods of declining interest rates, a bond issuer may “call,” or repay, its high yielding bonds before their maturity dates. The Fund would then be forced to invest the unanticipated proceeds at lower interest rates, resulting in a decline in its income.
 - *Credit Risk.* Fixed income securities are generally subject to the risk that the issuer may be unable to make principal and interest payments when they are due. There is also the risk that the securities could lose value because of a loss of confidence in the ability of the borrower to pay back debt. Lower rated fixed income securities involve greater credit risk, including the possibility of default or bankruptcy.

- *Duration Risk.* Longer-term securities may be more sensitive to interest rate changes. Given the recent, historically low interest rates and the potential for increases in those rates, a heightened risk is posed by rising interest rates to longer-term fixed income securities. Effective duration estimates price changes for relatively small changes in rates. If rates rise significantly, effective duration may tend to understate the drop in a security's price. If rates drop significantly, effective duration may tend to overstate the rise in a security's price.
- *Interest Rate Risk.* Fixed income securities are subject to the risk that the securities could lose value because of interest rate changes. For example, bonds tend to decrease in value if interest rates rise. Fixed income securities with longer maturities sometimes offer higher yields, but are subject to greater price shifts as a result of interest rate changes than fixed income securities with shorter maturities.
- *Liquidity Risk.* Trading opportunities are more limited for fixed income securities that have not received any credit ratings, have received ratings below investment grade or are not widely held. These features make it more difficult to sell or buy a security at a favorable price or time. Consequently, the Fund may have to accept a lower price to sell a security, sell other securities to raise cash or give up an investment opportunity, any of which could have a negative effect on its performance. Infrequent trading of securities may also lead to an increase in their price volatility. Liquidity risk also refers to the possibility that the Fund may not be able to sell a security or close out an investment contract when it wants to. If this happens, the Fund will be required to hold the security or keep the position open, and it could incur losses.
- *Prepayment and Extension Risk.* Many types of fixed income securities are subject to prepayment risk. Prepayment occurs when the issuer of a fixed income security can repay principal prior to the security's maturity. Fixed income securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. In addition, the potential impact of prepayment features on the price of a fixed income security can be difficult to predict and result in greater volatility. On the other hand, rising interest rates could cause prepayments of the obligations to decrease, extending the life of mortgage- and asset-backed securities with lower payment rates. This is known as extension risk and may increase the Fund's sensitivity to rising rates and its potential for price declines.
- *Foreign (Non-U.S.) Investment Risk.* Foreign securities include direct investments in non-U.S. dollar-denominated securities traded primarily outside of the United States and dollar-denominated securities of foreign issuers. Foreign securities also include indirect investments such as American Depositary Receipts ("ADRs"), European Depositary Receipts ("EDRs") and Global Depositary Receipts ("GDRs"). ADRs are U.S. dollar-denominated receipts representing shares of foreign-based corporations. ADRs are receipts that are traded in the United States, and entitle the holder to all dividend and capital gain distributions that are paid out on the underlying foreign shares. EDRs and GDRs are receipts that often trade on foreign exchanges. They represent ownership in an underlying foreign or U.S. security and generally are denominated in a foreign currency. Foreign government obligations may include debt obligations of supranational entities, including international organizations (such as The International Bank for Reconstruction and Development, also known as the World Bank) and international banking institutions and related government agencies.

Foreign (non-U.S.) securities present greater investment risks than investing in the securities of U.S. issuers and may experience more rapid and extreme changes in value than the securities of U.S. companies. Foreign securities involve risks related to less stringent foreign securities regulations and less information about foreign (non-U.S.) companies in the form of reports and ratings than about U.S. issuers; less stringent investor protections and corporate governance; more or less foreign government regulation; different accounting, auditing and financial reporting requirements; smaller markets; nationalization; expropriation or confiscatory taxation; currency blockage; or political, financial, social and economic events (including, for example, military confrontations, pandemics, war and terrorism) or diplomatic developments. To the extent that the Fund invests a significant portion of its assets in a specific geographic region, the Fund will generally have more exposure to regional economic risks associated with foreign investments. Foreign (non-U.S.) securities may also be less liquid and more difficult to value than securities of U.S. issuers. In addition, foreign markets may have greater volatility than domestic markets and foreign securities may be less liquid and harder to value than domestic securities. Certain foreign markets may rely heavily on particular industries or foreign capital and are more vulnerable to diplomatic developments, the imposition of economic sanctions against a particular country or countries, organizations, entities and/or individuals, changes in international trading patterns, trade barriers, and other protectionist or retaliatory measures. International trade barriers or economic sanctions against foreign countries, organizations, entities and/or individuals may adversely affect the Fund's foreign holdings or exposures.

Foreign securities involve special risks and costs, which are considered by the Adviser in evaluating the creditworthiness of issuers and making investment decisions for the Fund. Foreign securities fluctuate in price because of political, financial, social and economic events in foreign countries (including, for example, military confrontations, pandemics, war and terrorism). A foreign security could also lose value because of more or less stringent foreign securities regulations and less stringent accounting and disclosure standards. In addition, foreign markets may have greater volatility than domestic markets and foreign securities may be less liquid and harder to value than domestic securities.

Foreign securities, and in particular foreign debt securities, are sensitive to changes in interest rates. In addition, investment in the securities of foreign governments involves the risk that foreign governments may default on their obligations or may otherwise not respect the integrity of their obligations. The performance of investments in securities denominated in a foreign currency also will depend, in part, on the strength of the foreign currency against the U.S. dollar and the interest rate environment in the country issuing the currency. Absent other events which otherwise could affect the value of a foreign security (such as a change in the political climate or an issuer's credit quality), appreciation in the value of the foreign currency generally results in an increase in value of a foreign currency-denominated security in terms of U.S. dollars. A decline in the value of the foreign currency relative to the U.S. dollar generally results in a decrease in value of a foreign currency-denominated security. Additionally, many countries throughout the world are dependent on a healthy U.S. economy and are adversely affected when the U.S. economy weakens or its markets decline.

Investment in foreign securities may involve higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Foreign investments also may involve risks associated with the level of currency exchange rates, less complete financial information about the issuers, less market liquidity, more market volatility and political instability. Future political and economic developments, the possible imposition of withholding taxes on dividend income, the possible seizure or nationalization of foreign holdings, the possible establishment of exchange controls or freezes on the convertibility of currency, trade restrictions (including tariffs) or the adoption of other governmental restrictions might adversely affect an investment in foreign securities. Additionally, foreign banks and foreign branches of domestic banks may be subject to less stringent reserve requirements and to different accounting, auditing and recordkeeping requirements.

While the Fund's investments may, if permitted, be denominated in foreign currencies, the portfolio securities and other assets held by the Fund are valued in U.S. dollars. Price fluctuations may occur in the dollar value of foreign securities because of changing currency exchange rates or, in the case of hedged positions, because the U.S. dollar declines in value relative to the currency hedged. Currency exchange rates may fluctuate significantly over short periods of time causing the Fund's net asset value to fluctuate as well. Currency exchange rates can be affected unpredictably by the intervention or the failure to intervene by U.S. or foreign governments or central banks, or by currency controls or political developments in the United States or abroad. To the extent that the Fund is invested in foreign securities while also maintaining currency positions, it may be exposed to greater combined risk. The net currency positions of the Fund may expose them to risks independent of their securities positions.

The Fund may operate in euros and/or may hold euros and/or euro-denominated bonds and other obligations. The euro requires participation of multiple sovereign states forming the Euro zone and is therefore sensitive to the credit and general economic and political positions of each such state, including, each state's actual and intended ongoing engagement with and/or support for the other sovereign states then forming the European Union ("EU"), in particular those within the Euro zone. Changes in these factors might materially and adversely impact the value of securities in which the Fund has invested.

On January 31, 2020, the United Kingdom ("UK") left the EU (commonly referred to as "Brexit"). The UK and the EU signed the EU-UK Trade and Cooperation Agreement ("TCA"), which is an agreement on the terms governing certain aspects of the EU's and UK's relationship post Brexit. However, under the TCA, many aspects of the EU-UK relationship remain subject to further negotiation. The full effects of Brexit are unknown at this time and could negatively impact the value of the Fund's investments. Securities issued by companies domiciled in the UK could be subject to changing regulatory and tax regimes. Banking and financial services companies that operate in the UK or EU could be disproportionately impacted by those actions. Other countries may seek to withdraw from the EU and/or abandon the euro, the common currency of the EU, which could exacerbate market and currency volatility and negatively impact the Fund's investments in securities issued by companies located in EU countries. A number of countries in Europe have suffered terror attacks, and additional attacks may occur in the future. Ukraine has experienced ongoing military conflict; this conflict may expand and military attacks could occur in Europe. Europe has also been struggling with mass migration from the Middle East and Africa. Recent and upcoming European elections could, depending on the outcomes, further call into question the future direction of the EU. The ultimate effects of these events and other socio-political or geopolitical issues are not known but could profoundly affect global economies and markets. The impact of these actions, especially if they occur in a disorderly fashion, is not clear, but could be significant and far-reaching. Whether or not the Fund invests in securities of issuers located in Europe or with significant exposure to European issuers or countries, these events could negatively affect the value and liquidity of the Fund's investments.

- *Forward and Futures Contract Risk.* The successful use of forward and futures contracts draws upon the Adviser's skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, including increases to margin requirements by futures commission merchants as

a result of market conditions or periods of high volatility, and the Fund may have to sell securities at a time when it may be disadvantageous to do so. The Fund could be unable to recover assets held at the futures clearing broker, even assets directly traceable to the Fund from the futures clearing broker in the event of a bankruptcy of the broker. A futures clearing broker is required to segregate customer funds pursuant to the Commodities Exchange Act and the regulations of the U.S. Commodity Futures Trading Commission (“CFTC”). However, in the unlikely event of the broker’s bankruptcy, there is no equivalent of the Securities Investors Protection Corporation insurance as is applicable in the case of securities broker dealers’ bankruptcies. A counterparty to a forward and futures contract may also increase its collateral or margin requirements, due to regulatory requirements or otherwise, which may limit or restrict the Fund’s ability to use, or increase the cost to the Fund of, leverage and thereby reduce the Fund’s investment returns.

- *Gap Risk.* The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day’s closing price. For example, the price of a stock can drop from its closing price one night to its opening price the next morning. The difference between the two prices is the gap. Trading halts may lead to gap risk.
- *Hedging Transactions Risk.* The Adviser may employ various hedging techniques. The success of the Fund’s hedging strategy will be subject to the Adviser’s ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund’s hedging strategy will also be subject to the Adviser’s ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. Investing for hedging purposes or to increase the Fund’s return may result in certain additional transaction costs.

Hedging against a decline in the value of a portfolio position does not eliminate fluctuations in the values of those portfolio positions or prevent losses if the values of those positions decline. Rather, it establishes other positions designed to gain from those same declines, thus seeking to moderate the decline in the portfolio position’s value. Such hedging transactions also limit the opportunity for gain if the value of the portfolio position should increase. For a variety of reasons, the Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs. The Adviser may determine, in its sole discretion, not to hedge against certain risks and certain risks may exist that cannot be hedged. Furthermore, the Adviser may not anticipate a particular risk so as to hedge against it effectively. Hedging transactions also limit the opportunity for gain if the value of a hedged portfolio position should increase.

- *Index Risk.* If the derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index. If the index changes, the Fund could receive lower interest payments or experience a reduction in the value of the derivative to below what the Fund paid. Certain indexed securities, including inverse securities (which move in an opposite direction to the index), may create leverage, to the extent that they increase or decrease in value at a rate that is a multiple of the changes in the applicable index.
- *Issuer-Specific Risk.* The value of a specific security or option can be more volatile than the market as a whole and may perform worse than the market as a whole. The value of large cap securities, as represented by the S&P 500 Index, can be more volatile than smaller cap securities due to differing market reactions to adverse issuer, political, regulatory, market, or economic developments.
- *Large Shareholder Transactions Risk.* The Fund may experience adverse effects when certain large shareholders purchase or redeem large amounts of shares from the Fund. Such large shareholder redemptions may cause the Fund to sell their securities at times when it would not otherwise do so, which may negatively impact the Fund’s net asset value and liquidity. Such sales may also accelerate the increase of taxable income to shareholders if these sales result in gains, and may also increase transaction costs. In addition, a large redemption could result in the Fund’s current expenses being allocated over a smaller asset base, leading to an increase in the Fund’s expense ratio. Similarly, large share purchases may adversely affect the Fund’s performance to the extent that the Fund is delayed in investing new cash and is required to maintain a larger cash position than it ordinarily would.
- *Leveraging Risk.* The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may increase expenses and increase the impact of the Fund’s other risks. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations, to meet additional margin requirements or to meet regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.
- *LIBOR Risk.* The Fund may invest in securities and other instruments whose interest payments are determined by references to the London Interbank Offered Rate (“LIBOR”).

In 2017, the United Kingdom Financial Conduct Authority, which regulates LIBOR, announced it would cease its active encouragement of banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration Limited, the administrator of LIBOR, ceased publication of certain LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of the remaining LIBOR settings on a representative bases after June 30, 2023. The U.S. Federal Reserve has begun publishing Secured Overnight Financing Rate (SOFR), a broad measure of secured overnight U.S. Treasury repo rates, that is intended to replace U.S. dollar LIBOR. There are obstacles to converting certain longer term securities and transactions to a new benchmark and the effectiveness of one alternative reference rate versus multiple alternative reference rates in new or existing financial instruments and products has not been determined. In addition, it is expected that market participants will amend financial instruments referencing LIBOR to include fallback provisions and other measures that contemplate the discontinuation of LIBOR or other similar market disruption events, but neither the effect of the transition process nor the viability of such measures is known. As market participants transition away from LIBOR, LIBOR's usefulness may deteriorate. The transition process may lead to increased volatility and illiquidity in markets that currently rely on LIBOR to determine interest rates. The unavailability of LIBOR presents risks to the Fund, including the risk that any pricing or adjustments to the Fund's investments resulting from a substitute or alternate reference rate may adversely affect the Fund's performance and/or NAV. It remains uncertain how such changes would be implemented and the effects such changes would have on the Fund, including any negative effects on the Fund's liquidity and valuation of the Fund's investments, issuers of instruments in which the Fund invests and financial markets generally.

- *Liquidity Risk.* There is risk that the Fund may not be able to pay redemption proceeds within the time periods described in this Prospectus because of unusual market conditions, an unusually high volume of redemption requests, legal restrictions impairing its ability to sell particular securities or close derivative positions at an advantageous market price or other reasons. Certain portfolio securities may be less liquid than others, which may make them difficult or impossible to sell at the time and the price that the Fund would like or difficult to value. The Fund may have to lower the price, sell other securities instead or forgo an investment opportunity. In addition, less liquid securities may be more difficult to value and markets may become less liquid when there are fewer interested buyers or sellers or when dealers are unwilling or unable to make a market for certain securities. Recently, dealers have generally been less willing to make markets for fixed income securities. Any of these events could have a negative effect on fund management or performance. Funds with principal investment strategies that involve investments in securities of companies with smaller market capitalizations, foreign securities, Rule 144A securities, derivatives or securities with substantial market and/or credit risk tend to have the greatest exposure to liquidity risk. All of these risks may increase during periods of market turmoil, such as that experienced in 2020 with COVID-19, and could have a negative effect on the Fund's performance.
- *Management Risk.* The Fund's investment strategies may not result in an increase in the value of your investment in the Fund or in overall performance equal to other similar investment vehicles having similar investment strategies to those of the Fund. The net asset value of the Fund changes daily based on the performance of the securities and derivatives in which it invests. Additionally, the Adviser may have conflicts of interest that could interfere with its management of the Fund's portfolio. For example, the Adviser or its affiliates may manage other investment funds or have other clients that may be similar to, or overlap with, the investment objective and strategy of the Fund, creating potential conflicts of interest when making decisions regarding which investments may be appropriate for the Fund and other clients. Management risk includes the risk that the quantitative model used by the Fund's investment adviser may not perform as expected, and/or may not be successful in determining the investment positions or weighting that will enable the Fund to achieve its investment objective, particularly in volatile markets.
- *Market Risk.* Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond or other markets, volatility in the securities markets, adverse investor sentiment affect the securities markets and political events affect the securities markets. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future. Securities markets also may experience long periods of decline in value. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Equity securities generally have greater price volatility than fixed income securities, although under certain market conditions fixed income securities may have comparable or greater price volatility. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. Different sectors of the market and different security types may react differently to such developments. Changes in value may be temporary or may last for extended periods. The Fund may experience a substantial or complete loss on any individual security. Even when securities markets perform well, there is no assurance that the investments held by the Fund will increase in value along with the broader market. Market factors, such as the demand for particular portfolio securities, may cause the price of certain portfolio securities to fall while the prices of other securities rise or remain unchanged.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

- *Market Events Risk.* There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions are an inevitable part of investing in capital markets and may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.

COVID-19 has resulted in travel restrictions, closed international borders, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery, prolonged quarantines, cancellations, business and school closings, supply chain disruptions, and lower consumer demand, as well as general concern and uncertainty. The impact of COVID-19, and other infectious illness outbreaks that may arise in the future, could adversely affect the economies of many nations or the entire global economy, individual issuers and capital markets in ways that cannot necessarily be foreseen.

- *Model Risk.* The Fund will use model-based strategies that, while historically effective, may not be successful on an ongoing basis or could contain unknown errors. Any imperfections or limitations in a model could affect the ability of the manager to implement strategies. By necessity, models make simplifying assumptions that limit their efficacy. Models relying on historical market data can fail to predict future market events. Further, the data used in models may be inaccurate and/or it may not include the most recent information about a company or a security. In addition, computer programming used to create quantitative models, or the data on which such models operate, might contain one or more errors. Such errors might never be detected, or might be detected only after the Fund has sustained a loss (or reduced performance) related to such errors. Moreover, an increasing number of market participants may rely on models that are similar to those used by the Adviser, which may result in a substantial number of market participants taking the same action with respect to an investment. Should one or more of these other market participants begin to divest themselves of one or more portfolio holdings, the Fund could suffer significant losses. In addition, changes in underlying market conditions can adversely affect the performance of a model.
- *Money Market Instrument Risk.* The value of money market instruments may be affected by changing interest rates and by changes in the credit ratings of the investments. An investment in a money market fund is not insured or guaranteed by the FDIC or any other government agency. It is possible to lose money by investing in a money market fund. Recently, the SEC proposed money market fund reform intended to address potential systemic risks associated with money market funds and to improve transparency for money market fund investors. The money market fund reforms may impact the structure, operations and return potential of the money market funds in which the Fund invests.
- *Put Option Risk.* When the Fund purchases a put on a security or index it may lose the entire premium paid if the underlying security or index does not decrease in value.
- *Regulatory Risk.* Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund. For example, the SEC recently adopted regulations that subject activities of mutual funds trading certain derivative instruments to additional regulation, which could increase the operating expenses of the Fund and impair the Fund's ability to achieve its investment objective.

- *Short Sales Risk.* The Fund may attempt to limit its exposure to a possible market decline in the value of its portfolio securities through short sales of securities that its portfolio manager believes possess volatility characteristics similar to those being hedged. The Fund may also use short sales for non-hedging purposes to pursue its investment objectives if, in the portfolio manager's view, the security is over-valued. Short selling is speculative in nature and, in certain circumstances, can substantially increase the effect of adverse price movements on the Fund's portfolio. A short sale of a security involves the risk of an unlimited increase in the market price of the security that can in turn result in an inability to cover the short position and a theoretically unlimited loss. No assurance can be given that securities necessary to cover the Fund's short position will be available for purchase. Positions in shorted securities are speculative and more risky than "long" positions (purchases) because the cost of the replacement security is unknown. Therefore, the potential loss on an uncovered short is unlimited, whereas the potential loss on long positions is limited to the original purchase price. Any strategy that includes selling securities short could suffer significant losses. If the Fund is required to cover its short positions in securities at the same time other short-sellers are trying to borrow or buy such securities, a "short squeeze" could occur, causing the stock price to rise and making it more likely that the Fund will have to cover its short positions at an unfavorable price. In addition, if the Fund's securities short positions or its strategy become generally known as a result of required disclosure obligations or otherwise, it could have a significant effect on the Adviser's ability to implement its investment strategy. In particular, it would make it more likely that other investors could cause a "short squeeze" in the securities held short by the Fund forcing the Fund to cover its positions at a loss. Shorting will also result in higher transaction costs (such as interest and dividends), which reduce the Fund's return, and may result in higher taxes. The SEC and other U.S. and non-U.S. regulatory authorities have imposed, and may impose in the future, restrictions on short selling, either on a temporary or permanent basis. Such restrictions may include placing limitations on specific companies and/or industries with respect to which the Fund may enter into short positions, and may hinder the Fund in, or prevent it from, implementing its investment strategies, and may negatively affect performance.
- *Sovereign Debt Risk.* Sovereign debt instruments are subject to the risk that a governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt, due, for example to cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay or for further loans. There may be no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt that a governmental entity has not repaid may be collected.
- *Subsidiary Risk.* By investing in a Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. The commodity-related instruments held by the Subsidiary are subject to the same risks that would apply to similar investments if held directly by the Fund (see "Commodities Risk" above). There can be no assurance that the investment objective of the Subsidiary will be achieved. The Subsidiary is not registered under the 1940 Act, and, unless otherwise noted in this prospectus, is not subject to all the investor protections of the 1940 Act. However, the Fund wholly owns and controls the Subsidiary, and the Fund and its Subsidiary are both managed by the Adviser, making it unlikely that the Subsidiary will take action contrary to the interests of the Fund and its shareholders. The Board has oversight responsibility for the investment activities of the Fund, including its investment in the Subsidiary, and the Fund's role as sole shareholder of the Subsidiary. To the extent applicable to the investment activities of the Subsidiary, the Subsidiary will be subject to the same investment restrictions and limitations, and follow the same compliance policies and procedures, as its parent Fund. Unlike the Fund, the Subsidiary will not seek to qualify as a regulated investment company under Subchapter M of the Code.

There is a risk that the Internal Revenue Service could assert that the annual net profit realized by the Subsidiary and imputed for income tax purposes to the Fund will not be considered "qualifying income" for purposes of the Fund remaining qualified as a regulated investment company for U.S. federal income tax purposes. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or its Subsidiary to operate as described in this prospectus and the SAI and could adversely affect the Fund. For example, the Cayman Islands does not currently impose any income, corporate or capital gains tax, estate duty, inheritance tax, gift tax or withholding tax on the Subsidiary. If Cayman Islands law changes such that the Subsidiary must pay Cayman Islands taxes, the Fund's shareholders would likely suffer decreased investment returns.

- *Swap Risk.* Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.
 - *Credit Default Swaps Risk.* A credit default swap enables an investor to buy or sell protection against a credit event with respect to an issuer. Credit default swaps involve risks because they are difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial difficulty). The Fund bears the loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty.

- *Total Return Swaps Risk.* A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to the Fund’s portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset).
- *Tax Risk.* The federal income tax treatment of the complex securities in which the Fund may invest may not be clear or may be subject to recharacterization by the Internal Revenue Service (“IRS”). It could be more difficult to comply with the tax requirements applicable to regulated investment companies if the tax characterization of investments or the tax treatment of the income from such investments were successfully challenged by the IRS. Any such failure to comply with the rules applicable to regulated investment companies could make it more difficult for the Fund itself to comply with such rules. Furthermore, the ability of the Fund to gain commodity exposure as contemplated may be adversely affected by future legislation, regulatory developments, interpretive guidance or other actions by the IRS or the Treasury Department. Pursuant to guidance issued by the Treasury Department and the IRS, the Subsidiary’s commodity related income for a taxable year will only be treated as qualifying income to the extent the Subsidiary actually distributes such income out of its earnings and profits to the Fund for such taxable year or if such income constitutes other income derived with respect to the Fund’s business of investing in stock, securities, or currencies. In addition, the Fund’s use of derivatives may cause the Fund to realize higher amounts of short-term capital gains (generally taxed at ordinary income tax rates) than if the Fund had not used such instruments.
- *U.S. Government Securities Risk.* Treasury obligations may differ in their interest rates, maturities, times of issuance and other characteristics. Obligations of U.S. Government agencies and authorities are supported by varying degrees of credit but generally are not backed by the full faith and credit of the U.S. Government. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. In addition, the value of U.S. Government securities may be affected by changes in the credit rating of the U.S. Government.
- *Valuation Risk.* The sale price the Fund could receive for a security may differ from the Fund’s valuation of the security, particularly for securities that trade in low volume or volatile markets, or that are valued using a fair value methodology. Because portfolio securities of the Fund may be traded on non-U.S. exchanges, and non-U.S. exchanges may be open on days when the Fund does not price its shares, the value of the securities in the Fund’s portfolio may change on days when shareholders will not be able to purchase or sell the Fund’s shares.
- *Volatility Risk.* The Fund’s investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund’s portfolio may fluctuate due to factors that affect markets generally or that affect a particular industry or sector. The value of an investment in the Fund’s portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund’s net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.
- *Written/Sold Options Risk.* The Fund will incur a loss as a result of a written option (also referred to as a short position) if the price of the written option instrument increases in value between the date when the Fund write the option and the date on which the Fund purchases an offsetting position. The Fund’s losses are potentially large in a written put transaction and potentially unlimited in a written call transaction.

Portfolio Holdings Disclosure: A description of the Fund’s policies regarding the release of portfolio holdings information is available in the Fund’s SAI. Shareholders may request portfolio holdings schedules at no charge by calling 1-855-61-SUPER.

MANAGEMENT

Investment Adviser

Superfund Advisors Inc., with principal offices at Superfund Office Building, Grand Anse P.O. Box 1568 St. Georges, Grenada W.I, serves as the investment adviser for the Fund. Subject to the supervision of the Fund’s Board of Trustees, the Adviser is responsible for managing the Fund’s investments, executing transactions and providing related administrative services and facilities under an Investment Advisory Agreement between the Fund and the Adviser. The Adviser does not manage any other accounts. In connection with serving as the Adviser to the Fund, Superfund is an SEC-registered investment advisory firm, CFTC registered commodity pool operator, and a member of the National Futures Association. Superfund uses fully automated, proprietary, computerized trading systems in its management of the Fund that Superfund has licensed on a non-exclusive basis. A discussion regarding the basis for the Board of Trustees’ approval of the Investment Advisory Agreement is available in the Fund’s annual shareholder report dated October 31, 2021.

The Adviser provides investment advisory services and pays most of the Fund's operating expenses (with certain exceptions) in return for a "unitary fee." For its services to the Fund, the Adviser is entitled to receive an annual fee equal to 2.99% of the Fund's average daily net assets. For the fiscal year ended October 31, 2021, the aggregate fee paid to the Adviser was 0.00% of the Fund's average daily net assets. The Fund, not the Adviser, pays the following expenses: all brokerage fees and commissions, taxes, borrowing costs (such as dividend expense on securities sold short and interest), acquired fund fees and expenses and such extraordinary or non-recurring expenses as may arise, including litigation to which the Fund may be a party and indemnification of the Board of Trustees and officers with respect thereto.

The Adviser has contractually agreed to reduce the Fund's fees and/or absorb expenses of the Fund, including acquired fund fees and expenses, through February 28, 2023 to ensure that total annual Fund operating expenses (exclusive of any front-end or contingent deferred loads; brokerage fees and commissions; borrowing costs, such as interest and dividend expense on securities sold short; taxes; and extraordinary expenses, such as litigation expenses) do not exceed 0.00% of average daily net assets attributable to each of Class A, Class C and Class I shares, respectively. The Adviser has contractually agreed to waive the Fund's distribution and shareholder servicing fees under the Plans (as defined in "Distribution of Shares" below) through February 28, 2023 to 0.00% of average daily net assets attributable to each of Class A and Class C shares, respectively. These agreements may be terminated by the Fund's Board of Trustees on 60 days' written notice to the Adviser. There is no guarantee that any of these expense limitation and fee waiver arrangements will continue in place after February 28, 2023, at which time it will be determined whether such agreements will be renewed or revised.

Portfolio Manager

Tennyson Briggs

Tennyson Briggs has worked within the Superfund Group of affiliated companies for almost twenty (20) years. As a Microsoft Certified Professional Developer, he managed a team of in-house software developers, working on important infrastructure systems used throughout the trading process, including tools for Data Analysis, Order Management, Allocation Fairness Algorithms, Back-office Trade Reconciliation and Fund Accounting. Mr. Briggs is a citizen of Grenada, West Indies.

The SAI provides additional information about the Portfolio Manager's compensation, other accounts managed by the Portfolio Manager, and the Portfolio Manager's ownership of securities in the Fund.

Investment Subsidiary

The Fund may invest up to 25% of its total assets in the Subsidiary, a wholly-owned subsidiary of the Fund organized under the laws of the Cayman Islands. Generally, the Subsidiary will invest primarily in commodity futures, but it may also invest in financial futures, option and swap contracts, fixed income securities, pooled investment vehicles, including those that are not registered pursuant to the 1940 Act, and other investments intended to serve as margin or collateral for the Subsidiary's derivative positions. The Subsidiary is organized under the laws of the Cayman Islands, and is overseen by its own board of directors. The Fund is the sole shareholder of the Subsidiary. It is not currently expected that shares of the Subsidiary will be sold or offered to other investors. If, at any time, the Subsidiary proposes to offer or sell its shares to any investor other than the Fund, you will receive 60 days prior notice of such offer or sale.

As with the Fund, the Adviser is responsible for the Subsidiary's day-to-day business pursuant to an investment advisory agreement with the Subsidiary. Under this agreement, the Adviser provides the Subsidiary with the same type of management services, under the same terms, as are provided to the Fund. The advisory agreement with the Subsidiary provides for automatic termination upon the termination of the investment advisory agreement with respect to the Fund. The Subsidiary has also entered into separate contracts for the provision of custody, transfer agency, and audit services with the same service providers that provide those services to the Fund.

The Adviser has contractually agreed to waive the management fee it receives from the Fund in an amount equal to any management fee paid to the Adviser by the Subsidiary. This undertaking will continue in effect for so long as the Fund invests in the Subsidiary, and may not be terminated by the Adviser unless it first obtains the prior approval of the Fund's Board of Trustees for such termination. The Subsidiary will also bear the fees and expenses incurred in connection with the custody, transfer agency and audit services that it receives. The Fund expects that the expenses borne by the Subsidiary will not be material in relation to the value of the Fund's assets.

The Subsidiary will be managed pursuant to compliance policies and procedures that are the same, in all material respects, as the policies and procedures adopted by the Fund. As a result, the Adviser is subject to the same investment policies and restrictions that apply to the management of the Fund, and, in particular, to the requirements relating to portfolio leverage, liquidity, brokerage, and the timing and method of the valuation of the Subsidiary's portfolio investments. These policies and restrictions are described in detail in the Fund's SAI. The Fund's Chief Compliance Officer oversees implementation of the Subsidiary's policies and procedures, and makes periodic reports to the Fund's Board regarding the Subsidiary's compliance with its policies and procedures.

The financial statements of the Subsidiary are consolidated in the Fund's financial statements which are included in the Fund's annual and semi-annual reports. The Fund's annual and semi-annual reports are distributed to shareholders, and copies of the reports are provided without charge upon request as indicated on the back cover of this Prospectus. Please refer to the SAI for additional information about the organization and management of the Subsidiary.

HOW SHARES ARE PRICED

The net asset value (“NAV”) and offering price (NAV plus any applicable sales charges) of each class of shares is determined at 4:00 p.m. (Eastern Time) on each day the New York Stock Exchange (“NYSE”) is open for business. NAV is computed by determining, on a per class basis, the aggregate market value of all assets of the Fund, less its liabilities, divided by the total number of shares outstanding ((assets liabilities)/number of shares = NAV). The NYSE is closed on weekends and New Year’s Day, Martin Luther King, Jr. Day, President’s Day, Good Friday, Memorial Day, Juneteenth, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The NAV takes into account, on a per class basis, the expenses and fees of the Fund, including management, administration, and distribution fees, which are accrued daily. The determination of NAV for a share class for a particular day is applicable to all applications for the purchase of shares, as well as all requests for the redemption of shares, received by the Fund (or an authorized broker or agent, or its authorized designee) before the close of trading on the NYSE on that day.

Generally, fixed income securities having a remaining maturity of 60 days or less are valued at amortized cost, which approximates market value. Fixed income securities having a remaining maturity of greater than 60 days are valued using an independent pricing service. When prices are not available from such services or are deemed to be unreliable, such securities are valued in accordance with procedures approved by the Board. Securities traded or dealt in on one or more securities exchanges are valued each day at the last quoted sales price on each security’s primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask price on such exchange. Securities primarily traded in the National Association of Securities Dealers’ Automated Quotation System (“NASDAQ”) National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. Securities that are not traded or dealt in any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

If market quotations are not readily available, securities will be valued at their fair market value as determined in good faith by the Adviser in accordance with procedures approved by the Board and evaluated by the Board as to the reliability of the fair value method used. In these cases, the Fund’s NAV will reflect certain portfolio securities’ fair value rather than their market price. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security is materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board has delegated execution of these procedures to a fair value committee composed of one or more officers from each of the (i) Fund’s management, (ii) administrator, and (iii) Adviser. The team may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board reviews and considers the determinations reached by the fair value committee in ratifying the fair value committee’s application of the fair valuation methodologies employed.

The Fund may use independent pricing services to assist in calculating the fair market value of the Fund’s securities. In addition, market prices for foreign securities are not determined at the same time of day as the NAV for the Fund. In computing the NAV, the Fund values foreign securities held by the Fund at the latest closing price on the exchange in which they are traded immediately prior to closing of the NYSE. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in the Fund’s portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before the Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before the Fund calculates its NAV, the Adviser may need to price the security using the Fund’s fair value pricing guidelines. Without a fair value price, short-term traders could take advantage of the arbitrage opportunity and dilute the NAV of long-term investors. Fair valuation of the Fund’s portfolio securities can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that fair value pricing policies will prevent dilution of the Fund’s NAV by short term traders. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other mutual funds to determine NAV, or from the price that may be realized upon the actual sale of the security.

HOW TO PURCHASE SHARES

Share Classes: This Prospectus describes three classes of shares offered by the Fund: Class A, Class C and Class I. The Fund offers these three classes of shares so that you can choose the class that best suits your investment needs. Refer to the information below to help you make your investment decision. The main differences between each class are sales charges, ongoing fees and minimum investments. In choosing which class of shares to purchase, you should consider which will be most beneficial to you, given the amount of your purchase and the length of time you expect to hold the shares. For information on ongoing distribution fees, see the **Distribution Fees** section of this Prospectus. Each class of shares in the Fund represents interest in the same portfolio of investments within the Fund. There is no investment minimum on reinvested distributions, and the Fund may change investment minimums at any time. The Fund reserves the right to waive sales charges, as described below. The Fund and the Adviser may each waive investment minimums at their individual discretion. All share classes may not be available for purchase in all states.

Class A Shares: Class A shares are offered at their public offering price, which is NAV plus the applicable sales charge and is subject to 12b-1 distribution fees of up to 0.25% of the average daily net assets of Class A shares. The minimum initial investment in Class A shares of the Fund is \$2,500 for all accounts. The minimum subsequent investment in Class A shares of the Fund is \$500 for all accounts. The sales charge varies, depending on how much you invest. There are no sales charges on reinvested distributions. The following sales charges, which may be waived in the Adviser's discretion, apply to your purchases of Class A shares of the Fund:

Amount Invested	Sales Charge as a % of Offering Price ⁽¹⁾	Sales Charge as a % of Amount Invested	Dealer Reallocation
Under \$25,000	5.75%	6.10%	5.00%
\$25,000 to \$49,999	5.00%	5.26%	4.25%
\$50,000 to \$99,999	4.75%	4.99%	4.00%
\$100,000 to \$249,999	3.75%	3.83%	3.25%
\$250,000 to \$499,999	2.50%	2.56%	2.00%
\$500,000 to \$999,999	2.00%	2.04%	1.75%
\$1,000,000 and above	1.00%	1.01%	1.00%

(1) Offering price includes the front-end sales load. The sales charge you pay may differ slightly from the amount set forth above because of rounding that occurs in the calculation used to determine your sales charge.

How to Reduce Your Sales Charge

You may be eligible to purchase Class A shares at a reduced sales charge. To qualify for these reductions, you must notify the Fund's distributor, Northern Lights Distributors, LLC (the "Distributor"), in writing and supply your account number at the time of purchase. You may combine your purchase with those of your "immediate family" (your spouse and your children under the age of 21) for purposes of determining eligibility. If applicable, you will need to provide the account numbers of your spouse and your minor children as well as the ages of your minor children.

Rights of Accumulation: To qualify for the lower sales charge rates that apply to larger purchases of Class A shares, you may combine your new purchases of Class A shares with Class A shares of the Fund that you already own. The applicable initial sales charge for the new purchase is based on the total of your current purchase and the current value of all other Class A shares that you own. The reduced sales charge will apply only to current purchases and must be requested in writing when you buy your shares.

Shares of the Fund are held as follows and cannot be combined with your current purchase for purposes of reduced sales charges:

- Shares held indirectly through financial intermediaries other than your current purchase broker-dealer (for example, a different broker-dealer, a bank, a separate insurance company account or an investment advisor);
- Shares held through an administrator or trustee/custodian of an Employer Sponsored Retirement Plan (for example, a 401(k) plan) other than employer-sponsored IRAs;
- Shares held directly in the Fund account on which the broker-dealer (financial advisor) of record is different than your current purchase broker-dealer.

Letter of Intent: Under a Letter of Intent ("LOI"), you commit to purchase a specified dollar amount of Class A shares of the Fund, with a minimum of \$25,000, during a 13-month period. At your written request, Class A shares purchases made during the previous 90 days may be included. The amount you agree to purchase determines the initial sales charge you pay. If the full-face amount of the LOI is not invested by the end of the 13-month period, your account will be adjusted to the higher initial sales charge level for the amount actually invested. You are not legally bound by the terms of your LOI to purchase the amount of your shares stated in the LOI. The LOI does, however, authorize the Fund to hold in escrow 5% of the total amount you intend to purchase. If you do not complete the total intended purchase at the end of the 13-month period, the Fund's transfer agent will redeem the necessary portion of the escrowed shares to make up the difference between the reduced rate sales charge (based on the amount you intended to purchase) and the sales charge that would normally apply (based on the actual amount you purchased).

Repurchase of Class A Shares: If you have redeemed Class A shares of the Fund within the past 120 days, you may repurchase an equivalent amount of Class A shares of the Fund at NAV, without the normal front-end sales charge. In effect, this allows you to reacquire shares that you may have had to redeem, without repaying the front-end sales charge. You may exercise this privilege only once and must notify the Fund that you intend to do so in writing. The Fund must receive your purchase order within 120 days of your redemption. Note that if you reacquire shares through separate installments (e.g., through monthly or quarterly repurchases), the sales charge waiver will only apply to those portions of your repurchase order received within 120 days of your redemption.

Sales Charge Waivers

The sales charge on purchases of Class A shares is waived for certain types of investors, including:

- Direct purchases from the Fund.
- Current and retired directors and officers of any Fund sponsored by the Adviser or any of its subsidiaries, and their families (e.g., spouse, children, mother or father).
- Employees of the Adviser and their families, or any full-time employee or registered representative of the Distributor or of broker-dealers having dealer agreements with the Distributor (a “Selling Broker”) and their immediate families (or any trust, pension, profit sharing or other benefit plan for the benefit of such persons).
- Any full-time employee of a bank, savings and loan, credit union or other financial institution that utilizes a Selling Broker to clear purchases of the Fund’s shares and their immediate families.
- Participants in certain “wrap-fee” or asset allocation programs or other fee-based arrangements sponsored by broker-dealers and other financial institutions that have entered into agreements with the Distributor.
- Clients of financial intermediaries that have entered into arrangements with the Distributor providing for the shares to be used in particular investment products made available to such clients and for which such registered investment advisers may charge a separate fee.
- Institutional investors (which may include bank trust departments and registered investment advisers).
- Any accounts established on behalf of registered investment advisers or their clients by broker-dealers that charge a transaction fee and that have entered into agreements with the Distributor.
- Separate accounts used to fund certain unregistered variable annuity contracts or Section 403(b) or 401(a) or (k) accounts.
- Employer-sponsored retirement or benefit plans with total plan assets in excess of \$5 million where the plan’s investments in the Fund are part of an omnibus account. A minimum initial investment of \$1 million in the Fund is required. The Distributor in its sole discretion may waive these minimum dollar requirements.
- Any government entity that is prohibited from paying a sales charge or commission to purchase mutual fund shares.
- Any purchases by clients of the Adviser or purchases referred through the Adviser.

The Fund does not waive sales charges for the reinvestment of proceeds from the sale of shares of a different fund where those shares were subject to a front-end sales charge (sometimes called an “NAV transfer”). Whether a sales charge waiver is available for your retirement plan or charitable account depends upon the policies and procedures of your intermediary. Please consult your financial adviser for further information.

Class C Shares: Class C shares of the Fund are sold at NAV without an initial sales charge. This means that 100% of your initial investment is placed into shares of the Fund. Under a distribution and service plan adopted pursuant to Rule 12b-1 under the 1940 Act, Class C shares pay up to 1.00% on an annualized basis of the average daily net assets as reimbursement or compensation for service and distribution-related activities with respect to the Fund and/or shareholder services. Over time, fees paid under this distribution and service plan will increase the cost of a Class C shareholder’s investment and may cost more than other types of sales charges. The minimum initial investment in Class C shares of the Fund is \$2,500. The minimum subsequent investment in Class C shares of the Fund is \$500.

Class I Shares: Class I shares of the Fund are sold at NAV without an initial sales charge and are not subject to 12b-1 distribution fees, but have a higher minimum initial investment than Class A shares and Class C shares. This means that 100% of your initial investment is placed into shares of the Fund. Class I shares require a minimum initial investment of \$100,000 and the minimum subsequent investment is \$1,000.

Class I shares are available to certain institutional investors, and directly to certain individual investors as set forth below:

- Institutional Investors may include, but are not limited to, corporations, retirement plans, foundations/endowments and investors who purchase through a wrap account offered through a selling group member that enters into a wrap fee program agreement with the Distributor.
- Individual Investors include trustees, officers and employees of the Trust and its affiliates, and immediate family members of all such persons.
- Clients of the Adviser.
- To investors on certain brokerage platforms. For accounts sold through financial intermediaries, it is the primary responsibility of the financial intermediary to ensure compliance with eligibility requirements such as investor type and investment minimums. An investor transacting through a broker acting as an agent for the investor may be required to pay a commission and/or other forms of compensation to the broker. The Fund may change investment minimums at any time. The Fund and the Adviser may each waive investment minimums at their individual discretion. Class C or Class I shares may not be available for purchase in all states.

Investors in the Fund do not pay commission or transaction charges if shares are purchased directly from the Fund. The availability of certain sales charge waivers and discounts may depend on whether you purchase your shares directly from the Fund or through a financial intermediary. Specific intermediaries may have different policies and procedures regarding the availability of front-end sales load waivers or contingent deferred (back-end) sales load (CDSC) waivers. In all instances, it is the purchaser's responsibility to notify the Fund or the purchaser's financial intermediary at the time of purchase of any relationship or other facts qualifying the purchaser for sales charge waivers or discounts. For waivers and discounts not available through a particular intermediary, shareholders will have to purchase fund shares directly from the Fund or through another intermediary to receive these waivers or discounts.

Factors to Consider When Choosing a Share Class: When deciding which class of shares to purchase, you should consider your investment goals, present and future amounts you may invest in the Fund, and the length of time you intend to hold your shares. To help you make a determination as to which class of shares to buy, please refer back to the examples of the Fund's expenses over time in the **Fees and Expenses of the Fund** section for the Fund in this Prospectus. You also may wish to consult with your financial adviser for advice with regard to which share class would be most appropriate for you.

Purchasing Shares: You may purchase shares of the Fund by sending a completed application form (the "Application") to the following address:

Regular/Express/Overnight Mail
Superfund Managed Futures Strategy Fund
c/o Ultimus Fund Solutions, LLC
P.O. Box 541150
Omaha, NE 68154

Overnight Mail
Superfund Managed Futures Strategy Fund
c/o Ultimus Fund Solutions, LLC
4221 North 203rd Street, Ste. 100
Elkhorn, NE 68022

The USA PATRIOT Act requires financial institutions, including the Fund, to adopt certain policies and programs to prevent money-laundering activities, including procedures to verify the identity of customers opening new accounts. As requested on the Application, you should supply your full name, date of birth, social security number and permanent street address. Mailing addresses containing a P.O. Box will not be accepted. This information will assist the Fund in verifying your identity. Until such verification is made, the Fund may temporarily limit additional share purchases. In addition, the Fund may limit additional share purchases or close an account if it is unable to verify a shareholder's identity. As required by law, the Fund may employ various procedures, such as comparing the information to fraud databases or requesting additional information or documentation from you, to ensure that the information supplied by you is correct.

Purchase through Brokers: You may invest in the Fund through brokers or agents who have entered into selling agreements with the Fund's distributor. The brokers and agents are authorized to receive purchase and redemption orders on behalf of the Fund. Such brokers are authorized to designate other intermediaries to receive purchase and redemption orders on the Fund's behalf. The Fund will be deemed to have received a purchase or redemption order when an authorized broker or its designee receives the order. The broker or agent may set their own initial and subsequent investment minimums. You may be charged a fee if you use a broker or agent to buy or redeem shares of the Fund. Finally, various servicing agents use procedures and impose restrictions that may be in addition to, or different from those applicable to investors purchasing shares directly from the Fund. You should carefully read the program materials provided to you by your servicing agent.

Purchase by Wire: If you wish to wire money to make an investment in the Fund, please call the Fund at 1-855-61-SUPER for wiring instructions and to notify the Fund that a wire transfer is coming. Any commercial bank can transfer same-day funds via wire. The Fund will normally accept wired funds for investment on the day received if they are received by the Fund's designated bank before the close of regular trading on the NYSE. Your bank may charge you a fee for wiring same-day funds.

Automated Clearing House (ACH) Purchase

Current shareholders may purchase additional shares via Automated Clearing House ("ACH"). To have this option added to your account, please send a letter to the Fund requesting this option and supply a voided check for the bank account. Only bank accounts held at domestic institutions that are ACH members may be used for these transactions.

You may not use ACH transactions for your initial purchase of Fund shares. ACH purchases will be effective at the closing price per share on the business day after the order is placed. The Fund may alter, modify or terminate this purchase option at any time.

Shares purchased by ACH will not be available for redemption until the transactions have cleared. Shares purchased via ACH transfer may take up to 15 days to clear.

Automatic Investment Plan: You may participate in the Fund's Automatic Investment Plan, an investment plan that automatically moves money from your bank account and invests it in the Fund through the use of electronic funds transfers or automatic bank drafts. You may elect to make subsequent investments by transfers of a minimum of \$100 on specified days of each month into your established Fund account. Please contact the Fund at 1-855-61-SUPER for more information about the Fund's Automatic Investment Plan.

Minimum and Additional Investment Amounts: The minimum initial investment in Class A shares and Class C shares is \$2,500. The minimum initial investment in Class I shares is \$100,000. The minimum additional investment for Class A shares and Class C shares is \$500; and \$1,000 for Class I shares. There is no minimum investment requirement when you are buying shares by reinvesting dividends and distributions from the Fund. The Fund reserves the right to waive any investment minimum requirement.

The Fund, however, reserves the right, in its sole discretion, to reject any application to purchase shares. Applications will not be accepted unless they are accompanied by a check drawn on a U.S. bank, thrift institutions, or credit union in U.S. funds for the full amount of the shares to be purchased. After you open an account, you may purchase additional shares by sending a check together with written instructions stating the name(s) on the account and the account number, to the above address. Make all checks payable to the Fund. The Fund will not accept payment in cash, including cashier's checks or money orders. Also, to prevent check fraud, the Fund will not accept third party checks, U.S. Treasury checks, credit card checks or starter checks for the purchase of shares. Redemptions of Shares of the Fund purchased by check may be subject to a hold period until the check has been cleared by the issuing bank. To avoid such holding periods, Shares may be purchased through a broker or by wire, as described in this section.

Note: Ultimus Fund Solutions, LLC, the Fund's transfer agent, will charge a \$25 fee against a shareholder's account, in addition to any loss sustained by the Fund, for any check returned to the transfer agent for insufficient funds.

When Order is Processed: All shares will be purchased at the NAV per share (plus applicable sales charges, if any) next determined after the Fund receives your application or request in good order. All requests received in good order by the Fund before 4:00 p.m. (Eastern Time) will be processed on that same day. Requests received after 4:00 p.m. (Eastern Time) will be processed on the next business day.

Good Order: When making a purchase request, make sure your request is in good order. "Good order" means your purchase request includes:

- the name of the Fund;
- the dollar amount of shares to be purchased;
- a completed purchase application or investment stub; and
- check payable to the "Superfund Managed Futures Strategy Fund."

Retirement Plans: You may purchase shares of the Fund for your individual retirement plans. Please call the Fund at 1-855-61-SUPER for the most current listing and appropriate disclosure documentation on how to open a retirement account.

HOW TO REDEEM SHARES

Redeeming Shares: If you hold shares directly through an account with the Fund, you may redeem all or any portion of the shares credited to your account by submitting a written request for redemption to:

Regular/Express/Overnight Mail
Superfund Managed Futures Strategy Fund
c/o Ultimus Fund Solutions, LLC
P.O. Box 541150
Omaha, NE 68154

Overnight Mail
Superfund Managed Futures Strategy Fund
c/o Ultimus Fund Solutions, LLC
4221 North 203rd Street, Ste. 100
Elkhorn, NE 68022

Redemptions by Telephone: The telephone redemption privilege is automatically available to all new accounts. If you do not want the telephone redemption privilege, you must indicate this in the appropriate area on your account application or you must write to the Fund and instruct it to remove this privilege from your account. The proceeds, which are equal to number of shares times NAV less any applicable deferred sales charges or redemption fees, will be sent by mail to the address designated on your account or sent electronically, via ACH or wire, directly to your existing account in a bank or brokerage firm in the United States as designated on your application. To redeem by telephone, call 1-855-61-SUPER. The redemption proceeds normally will be sent by mail or electronically within three business days after receipt of your telephone instructions.

During periods of high market activity, you may encounter higher than usual wait times. Please allow sufficient time to ensure that you will be able to complete your telephone transaction prior to market close. Neither the Fund nor its transfer agent will be held liable if you are unable to place your trade due to high call volume.

The Fund reserves the right to suspend the telephone redemption privileges with respect to your account if the name(s) or the address on the account has been changed within the previous 30 days. Neither the Fund, the transfer agent, nor their respective affiliates will be liable for complying with telephone instructions they reasonably believe to be genuine or for any loss, damage, cost or expenses in acting on such telephone instructions and you will be required to bear the risk of any such loss. The Fund or the transfer agent, or both, will employ reasonable procedures to determine that telephone instructions are genuine. If the Fund and/or the transfer agent do not employ these procedures, they may be liable to you for losses due to unauthorized or fraudulent instructions. These procedures may include, among others, requiring forms of personal identification prior to acting upon telephone instructions, providing written confirmation of the transactions and/or tape recording telephone instructions.

Redemptions through Broker: If shares of the Fund are held by a broker-dealer, financial institution or other servicing agent, you must contact that servicing agent to redeem shares of the Fund. The servicing agent may charge a fee for this service.

Redemptions by Wire: You may request that your redemption proceeds be wired directly to your bank account. The Fund's transfer agent imposes a \$15 fee for each wire redemption and deducts the fee directly from your account. Your bank may also impose a fee for the incoming wire.

Systematic Withdrawal Plan: If your individual account, IRA or other qualified plan account has a current account value of at least \$10,000, you may participate in the Fund's *Systematic Withdrawal Plan*, an investment plan that automatically moves money to your bank account from the Fund through the use of electronic funds transfers. You may elect to make subsequent withdrawals by transfers of a minimum of \$100 on specified days of each month into your established bank account. Please contact the Fund at 1-855-61-SUPER for more information about the Fund's *Systematic Withdrawal Plan*.

Redemptions in Kind: It is expected that payment of redemption proceeds will normally be made from uninvested cash or short-term investments, or proceeds from the sale of portfolio securities. It is possible that stressed market conditions or large shareholder redemptions may result in the need for utilization of the Fund's ability to redeem in kind in order to meet shareholder redemption requests. The Fund reserves the right to honor requests for redemption or repurchase orders made by a shareholder during any 90-day period by making payment in whole or in part in portfolio securities ("redemption in kind") if the amount of such a request is large enough to affect operations (if the request is greater than the lesser of \$250,000 or 1% of the Fund's net assets at the beginning of the 90-day period). The securities will be chosen by the Fund and valued using the same procedures as used in calculating the Fund's NAV. A shareholder may incur transaction expenses in converting these securities to cash.

When Redemptions are Sent: Once the Fund receives your redemption request in “good order” as described below, it will issue a check based on the next determined NAV following your redemption request. The redemption proceeds normally will be sent by mail or by wire within three business days after receipt of a request in “good order.” If you purchase shares using a check and soon after request a redemption, your redemption proceeds, which are payable at the next determined NAV following the receipt your redemption request in “good order”, as described below, will not be sent until the check used for your purchase has cleared your bank.

Good Order: Your redemption request will be processed if it is in “good order.” To be in good order, the following conditions must be satisfied:

- The request should be in writing, unless redeeming by telephone, indicating the number of shares or dollar amount to be redeemed;
- The request must identify your account number;
- The request should be signed by you and any other person listed on the account, exactly as the shares are registered; and
- If you request that the redemption proceeds be sent to a person, bank or an address other than that of record or paid to someone other than the record owner(s), or if the address was changed within the last 30 days, or if the proceeds of a requested redemption exceed \$50,000, the signature(s) on the request must be medallion signature guaranteed by an eligible signature guarantor.

When You Need Medallion Signature Guarantees: If you wish to change the bank or brokerage account that you have designated on your account, you may do so at any time by writing to the Fund with your signature guaranteed. A medallion signature guarantee assures that a signature is genuine and protects you from unauthorized account transfers. You will need your signature guaranteed if:

- you request a redemption to be made payable to a person not on record with the Fund;
- you request that a redemption be mailed to an address other than that on record with the Fund;
- the proceeds of a requested redemption exceed \$50,000;
- any redemption is transmitted by federal wire transfer to a bank other than the bank of record; or
- your address was changed within 30 days of your redemption request.

Signatures may be guaranteed by any eligible guarantor institution (including banks, brokers and dealers, credit unions, national securities exchanges, registered securities associations, clearing agencies and savings associations). Further documentation will be required to change the designated account if shares are held by a corporation, fiduciary or other organization. *A notary public cannot guarantee signatures.*

Retirement Plans: If you own an IRA or other retirement plan, you must indicate on your redemption request whether the Fund should withhold federal income tax. Unless you elect in your redemption request that you do not want to have federal tax withheld, the redemption will be subject to withholding.

Low Balances: If at any time your account balance falls below \$2,000 (\$1,000 for retirement accounts), the Fund may notify you that, unless the account is brought up to at least \$2,000 (\$1,000 for retirement accounts) within 30 days of the notice, your account could be closed. After the notice period, the Fund may redeem all of your shares and close your account by sending you a check to the address of record. Your account will not be closed if the account balance drops below \$2,000 (\$1,000 for retirement accounts) due to a decline in NAV.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

The Fund discourages and does not accommodate market timing. Frequent trading into and out of the Fund can harm all Fund shareholders by disrupting the Fund's investment strategies, increasing Fund expenses, decreasing tax efficiency and diluting the value of shares held by long-term shareholders. The Fund is designed for long-term investors and is not intended for market timing or other disruptive trading activities. Accordingly, the Fund's Board has approved policies that seek to curb these disruptive activities while recognizing that shareholders may have a legitimate need to adjust their Fund investments as their financial needs or circumstances change. The Fund currently uses several methods to reduce the risk of market timing. These methods include:

- Committing staff to review, on a continuing basis, recent trading activity in order to identify trading activity that may be contrary to the Fund's "Market Timing Trading Policy;"
- Rejecting or limiting specific purchase requests;
- Rejecting purchase requests from certain investors; and
- Charging a 1% redemption fee
- on shares sold within 30 days of purchase.

Though these methods involve judgments that are inherently subjective and involve some selectivity in their application, the Fund seeks to make judgments and applications that are consistent with the interests of the Fund's shareholders.

Based on the frequency of redemptions in your account, the Adviser or transfer agent may in its sole discretion determine that your trading activity is detrimental to the Fund as described in the Fund's Market Timing Trading Policy and elect to (i) reject or limit the amount, number, frequency or method for requesting future purchases into the Fund and/or (ii) reject or limit the amount, number, frequency or method for requesting future exchanges or redemptions out of the Fund.

The Fund reserves the right to reject or restrict purchase requests for any reason, particularly when the shareholder's trading activity suggests that the shareholder may be engaged in market timing or other disruptive trading activities. Neither the Fund nor the Adviser will be liable for any losses resulting from rejected purchase orders. The Adviser may also bar an investor who has violated these policies (and the investor's financial advisor) from opening new accounts with the Fund.

Although the Fund attempts to limit disruptive trading activities, some investors use a variety of strategies to hide their identities and their trading practices. There can be no guarantee that the Fund will be able to identify or limit these activities. Omnibus account arrangements are common forms of holding shares of the Fund. While the Fund will encourage financial intermediaries to apply the Fund's Market Timing Trading Policy to their customers who invest indirectly in the Fund, the Fund is limited in its ability to monitor the trading activity or enforce the Fund's Market Timing Trading Policy with respect to customers of financial intermediaries. For example, should it occur, the Fund may not be able to detect market timing that may be facilitated by financial intermediaries or made difficult to identify in the omnibus accounts used by those intermediaries for aggregated purchases, exchanges and redemptions on behalf of all their customers. More specifically, unless the financial intermediaries have the ability to apply the Fund's Market Timing Trading Policy to their customers through such methods as implementing short-term trading limitations or restrictions and monitoring trading activity for what might be market timing, the Fund may not be able to determine whether trading by customers of financial intermediaries is contrary to the Fund's Market Timing Trading Policy. Brokers maintaining omnibus accounts with the Fund have agreed to provide shareholder transaction information to the extent known to the broker to the Fund upon request. If the Fund or its transfer agent or shareholder servicing agent suspects there is market timing activity in the account, the Fund will seek full cooperation from the service provider maintaining the account to identify the underlying participant. At the request of the Adviser, the service providers may take immediate action to stop any further short-term trading by such participants.

TAX STATUS, DIVIDENDS AND DISTRIBUTIONS

The Fund intends to distribute substantially all of its net investment income and net capital gains annually in December. Both types of distributions will be reinvested in shares of the Fund unless you elect to receive cash. Dividends from net investment income (including any excess of net short-term capital gain over net long-term capital loss) are taxable to investors as ordinary income, while distributions of net capital gain (the excess of net long-term capital gain over net short-term capital loss) are generally taxable as long-term capital gain, regardless of your holding period for the shares. Because the Fund's income is derived primarily from sources that do not pay "qualified dividend income," dividends from the Fund generally are not expected to qualify for taxation at the long-term capital gain rates available to individuals on qualified dividend income. Any dividends or capital gain distributions you receive from the Fund will normally be taxable to you when made, regardless of whether you reinvest dividends or capital gain distributions or receive them in cash. Certain dividends or distributions declared in October, November or December will be taxed to shareholders as if received in December if they are paid during the following January. Each year the Fund will inform you of the amount and type of your distributions.

When you redeem, sell or exchange Fund shares, you will generally realize a taxable gain or loss (unless you are a tax-exempt investor or your investment is in a qualified retirement account). This gain or loss is measured by the difference between the proceeds of the sale and the tax basis for the shares you sold. (To aid in computing your tax basis, you generally should retain your account statements for the period that you hold shares in the Fund. The Fund (or its administrative agent) is required to report to the IRS and furnish to shareholders the cost basis information for sale transactions of shares).

An additional 3.8% Medicare tax will be imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Fund shares) of U.S. individuals, estates and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds a threshold amount.

The Fund must report to the IRS and furnish to shareholders the cost basis information for shares purchased and sold. The Fund has chosen average cost as its standing (default) tax lot identification method for all shareholders, which means this is the method the Fund will use to determine which specific shares are deemed to be sold when there are multiple purchases on different dates at differing NAVs, and the entire position is not sold at one time. Shareholders may, however, choose a method other than the Fund's standing method at the time of their purchase or upon sale of covered shares. Shareholders should consult their tax advisors to determine the best IRS-accepted cost basis method for their tax situation and to obtain more information about how cost basis reporting applies to them. Shareholders also should carefully review the cost basis information provided to them by the Fund and make any additional basis, holding period or other adjustments that are required when reporting these amounts on their federal income tax returns.

On the account application, you will be asked to certify that your social security number or taxpayer identification number is correct and that you are not subject to backup withholding for failing to report income to the IRS. If you are subject to backup withholding or you did not certify your taxpayer identification number, the IRS requires the Fund to withhold a percentage of any dividend, redemption or exchange proceeds (currently, at a rate of 24%). The Fund reserves the right to reject any application that does not include a certified social security or taxpayer identification number. If you do not have a social security number, you should indicate on the purchase form that your application to obtain a number is pending. The Fund may be required to withhold taxes if a taxpayer identification number is not delivered to the Fund within seven days.

The Fund must derive at least 90% of its gross income from certain qualifying sources of income in order to qualify as a regulated investment company under the Code. The IRS issued a revenue ruling in December 2005 which concluded that income and gains from certain commodity-linked derivatives is not qualifying income under Subchapter M of the Code. As a result, the Fund's ability to invest directly in commodity-linked swaps as part of its investment strategy is limited by the requirement that it receive no more than ten percent (10%) of its gross income from such investments. However, in Revenue Ruling 2006-31, the IRS indicated that income from alternative investment instruments (such as certain structured notes) that create commodity exposure may be considered qualifying income under the Code. The IRS subsequently issued private letter rulings to other taxpayers in which the IRS specifically concluded that income from certain commodity index-linked notes is qualifying income and that income derived from a fund's investment in a controlled foreign corporation ("CFC") also will constitute qualifying income to the fund, even if the CFC itself owns commodity-linked swaps. The IRS has currently suspended the issuance of private letter rulings relating to the tax treatment of income and gains generated by investments in commodity index-linked notes and income generated by investments in a subsidiary and revoked prior rulings. The Fund seeks to gain exposure to the commodity markets primarily through investments in commodity index-linked notes and through investments in the Subsidiary.

A private letter ruling cannot be used or cited as precedent and is binding on the IRS only for the taxpayer that receives it. The Fund has not obtained a ruling from the IRS with respect to its investments or its structure. Based on the analysis in private letter rulings previously issued to other taxpayers, the Fund intends to treat its income from commodity index-linked notes and the Subsidiary as qualifying income without any such ruling from the IRS. There can be no assurance that the IRS will not change its position with respect to some or all of these issues or if the IRS did so, that a court would not sustain the IRS's position. Furthermore, the tax treatment of the Fund's investments in commodity-linked notes and in the Subsidiary may be adversely affected by future legislation or Treasury regulations.

If the IRS were to change its position or otherwise determine that income derived from certain commodity-linked notes does not constitute qualifying income and if such position were upheld, or if future legislation or Treasury regulations were to adversely affect the tax treatment of such investments, the Fund might cease to qualify as a regulated investment company and would be required to reduce its exposure to such investments which might result in difficulty in implementing its investment strategy. If the Fund did not qualify as a regulated investment company for any taxable year, the Fund's taxable income would be subject to tax at the Fund level at regular corporate tax rates (currently, at a maximum rate of 21% and without reduction for distributions to shareholders) and to a further tax at the shareholder level when such income is distributed. In such an event, in order to re-qualify for taxation as a regulated investment company, the Fund may be required to recognize unrealized gains, pay substantial taxes and interest and make certain distributions.

The foregoing is only a brief summary of certain federal income tax consequences of investing in the Fund. This summary is not intended to be and should not be construed to be legal or tax advice. You should consult your own tax advisers to determine the tax consequences of owning the Fund's shares. For additional information about taxes, see the Fund's SAI.

DISTRIBUTION OF SHARES

Distributor: Northern Lights Distributors, LLC, 4221 North 203rd Street, Ste. 100, Elkhorn, Nebraska 68022, is the distributor for the shares of the Fund. Northern Lights Distributors, LLC is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. (“FINRA”). Shares of the Fund are offered on a continuous basis.

Distribution Fees: Each class of shares of the Fund, other than Class I shares, has adopted a Distribution Plan (“12b-1 Plan” or “Plan”), pursuant to which the Fund may pay the Distributor an annual fee for distribution and shareholder servicing expenses of up to 0.25% of the Fund’s average daily net assets attributable to Class A shares, and up to 1.00% of the Fund’s average daily net assets attributable to Class C shares.

The Distributor and other entities are paid under the Plan for services provided and the expenses borne by the Distributor and others in the distribution of Fund shares, including the payment of commissions for sales of the shares and incentive compensation to and expenses of dealers and others who engage in or support distribution of shares or who service shareholder accounts, including overhead and telephone expenses; printing and distribution of prospectuses and reports used in connection with the offering of the Fund’s shares to other than current shareholders; and preparation, printing and distribution of sales literature and advertising materials. In addition, the Distributor or other entities may utilize fees paid pursuant to the Plan to compensate dealers or other entities for their opportunity costs in advancing such amounts, which compensation would be in the form of a carrying charge on any un-reimbursed expenses.

You should be aware that if you hold your shares for a substantial period of time, you may indirectly pay more than the economic equivalent of the maximum front-end sales charge allowed by FINRA due to the recurring nature of distribution (12b-1) fees.

The Trust, on behalf of the Fund, has contractually agreed to waive or limit the Fund’s distribution (12b-1) fees to 0.00% of average daily net assets attributable to each of Class A and Class C shares, respectively, through February 28, 2023. This Rule 12b-1 Fee Waiver Letter Agreement may be terminated by the Fund’s Board of Trustees on 60 days’ written notice to the Adviser. There is no guarantee that these waivers will continue in place after February 28, 2023, at which time it will be determined whether such agreement will be renewed or revised.

Additional Compensation to Financial Intermediaries: The Distributor, its affiliates, and the Fund’s Adviser may, at its own expense and out of its own legitimate profits, provide additional cash payments to financial intermediaries who sell shares of the Fund, including affiliates of the Adviser. Financial intermediaries include brokers, financial planners, banks, insurance companies, retirement or 401(k) plan administrators and others. These payments may be in addition to the Rule 12b-1 fees and any sales charges that are disclosed elsewhere in this Prospectus. These payments are generally made to financial intermediaries that provide shareholder or administrative services, or marketing support. Marketing support may include access to sales meetings, sales representatives and financial intermediary management representatives, inclusion of the Fund on a sales list, including a preferred or select sales list, or other sales programs. These payments also may be made as an expense reimbursement in cases where the financial intermediary provides shareholder services to Fund shareholders.

To the extent permitted by the Securities and Exchange Commission and FINRA rules and other applicable laws and regulations, the Adviser, the Distributor and their affiliates may, from time to time, provide promotional incentives, including reallowance and/or payment of up to the entire sales charge, to certain investment firms. Such incentives may, at the Distributor’s discretion, be limited to investment firms who allow their individual selling representatives to participate in such additional commissions.

Householding: To reduce expenses, the Fund mails only one copy of the prospectus and each annual and semi-annual report (or, if applicable, each notice of electronic accessibility thereof) to those addresses shared by two or more accounts. If you wish to receive individual copies of these documents, please call the Fund at 1-855-61-SUPER on days the Fund is open for business or contact your financial institution. The Fund will begin sending you individual copies thirty days after receiving your request.

CONSOLIDATED FINANCIAL HIGHLIGHTS

The consolidated financial highlights table is intended to help you understand the Fund's financial performance for the period of the Fund's or share class's operations. Certain information reflects financial results for a single Fund share. The total returns in the tables represent the rate that an investor would have earned (or lost) on an investment in the Fund (assuming reinvestment of all dividends and distributions). This information for the Fund has been derived from the consolidated financial statements audited by the Fund's independent registered public accounting firm, RSM US LLP whose report, along with the Fund's consolidated financial statements and related notes, are included in the Fund's October 31, 2021 annual report, which is available upon request and incorporated by reference in the Statement of Additional Information.

Additional information about the Fund is included in the Fund's SAI and annual and semi-annual reports to shareholders. The SAI and the consolidated financial statements included in the Fund's most recent annual report to shareholders for the fiscal year ended October 31, 2021, including the notes thereto and report of the independent registered public accounting firm thereon, are incorporated into this Prospectus by reference (i.e., legally made a part of this Prospectus). The SAI provides more details about the Fund's policies and management. In the Fund's Annual Report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year.

To obtain a free copy of the SAI and the annual and semi-annual Reports to Shareholders, or other information about the Fund, or to make shareholder inquiries about the Fund, please call 1-855-61-SUPER. The SAI, Annual and Semi-annual reports and other information relating to the Fund are available, free of charge, at www.superfundmutualfunds.com. You may also write to:
